## About Vyapin Virtualization Management Suite

---

**Vyapin Virtualization Management Suite** is a powerful solution for auditing, managing and monitoring virtual machines across your entire Windows network. The Vyapin Virtualization Management Suite consists of three modules - the VM Reports module, the VM Performance Analyzer module and the VM Performance Monitor module.

**VM Reports Module:** With the VM Reports module you can perform a complete scan for all installed VMs in your network. You can perform an automated inventory of VMs and their configuration at regular intervals and keep a constant watch on the health of your Hyper-V Servers. The solution provides a variety of audit reports that are simple, elegant and highly customizable for System Administrators, IT Infrastructure Managers and Systems Audit personnel to use and act on.

**VM Performance Analyzer Module:** With the VM Performance Analyzer module you can analyze the performance history of Hosts and VMs in your network. You can collect performance metrics at regular intervals of time and then analyze these performance metrics over a period of time. You can perform a Trend analysis of various loads by charting the history of important performance variables related to CPU, Memory, IO and Network. The Analyzer module assists you in Capacity Planning of future workloads by letting you analyze current workloads by aggregating data from pre-defined intervals of time such as Daily, Weekly and Monthly subsets of data.

**VM Performance Monitor Module:** VM Performance Monitor module is a resource monitoring tool that collects performance metrics for Hyper-V hosts and their VMs and lets you monitor important CPU, Memory, IO and Network resources in real time using charts and tables.

Vyapin Virtualization Management Suite has been architected using the latest Microsoft .NET technology, bringing you the best-in-breed reporting solution for your entire Hyper-V Servers. Vyapin Virtualization Management Suite is highly optimized for performance (using native Windows API calls wherever appropriate), resulting in fast data collection of deeply embedded configuration data. Imagine scanning your vast network of Hyper-V servers without having to wait forever to see your reports! You can create data subsets for your network using our powerful scan options and meaningfully segment your entire network for data collection and reporting.

## System Requirements

---

For the computer running Vyapin Virtualization Management Suite

<b>Processor</b>	Intel Pentium processor
<b>Disk space &amp; Memory</b>	512 MB RAM and minimum of 20 MB of free disk space
<b>Operating Systems</b>	Windows 10 / Windows 8.1 / Windows 8 / Windows 7 / Windows Server 2012 R2 / Windows Server 2012 / Windows Server 2008 R2 / Windows Server 2008 / Windows Server 2003 with .NET Framework 4.0 or higher with the latest service packs
<b>Database</b>	Microsoft SQL Server 2012 (Enterprise / Standard / Developer / Express edition) or Microsoft SQL Server 2008 (Enterprise / Standard / Developer / Express edition) or Microsoft SQL Server 2005 (Enterprise / Standard / Developer / Express edition) running in local / remote computer with latest Service Pack
<b>Software</b>	<a href="#">MDAC v2.5/2.6/2.8</a>

**For the Hyper-V Servers reported by Vyapin Virtualization Management Suite**

Microsoft Hyper-V Server 2012 R2 / Microsoft Hyper-V Server 2012 / Microsoft Hyper-V Server 2008 R2 / Microsoft Hyper-V Server 2008 with Microsoft Windows Management Instrumentation Service enabled.

## How to Purchase?

---

You can purchase Vyapin Virtualization Management Suite online from our website <http://www.vyapin.com/>. Please contact our Sales department at [sales@vyapin.com](mailto:sales@vyapin.com) for sales and price related queries.

## How to register the software?

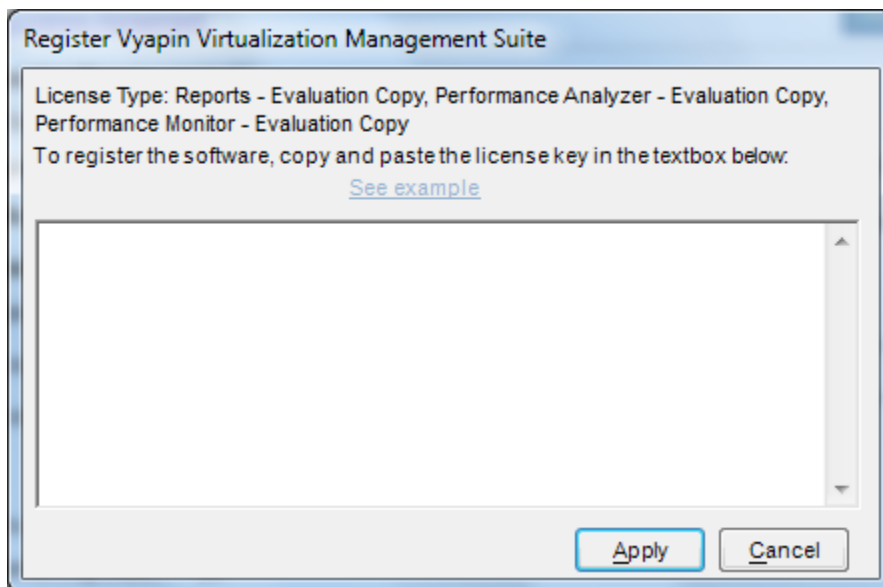

---

Once you purchase the software online or through any one of our resellers, you will receive a sale notification through e-mail from our sales department. We will send you an e-mail with the necessary instructions to activate the software.

In case you do not receive an e-mail from our sales team after you purchase the software, please send the following information to our sales department at sales@vyapin.com with the sales order number:

- **Company Name** : End-user Company Name
- **Location** : City & Country for the Company Name given above

Please allow 12 to 24 hours from the time of purchase for our sales department to process your orders.

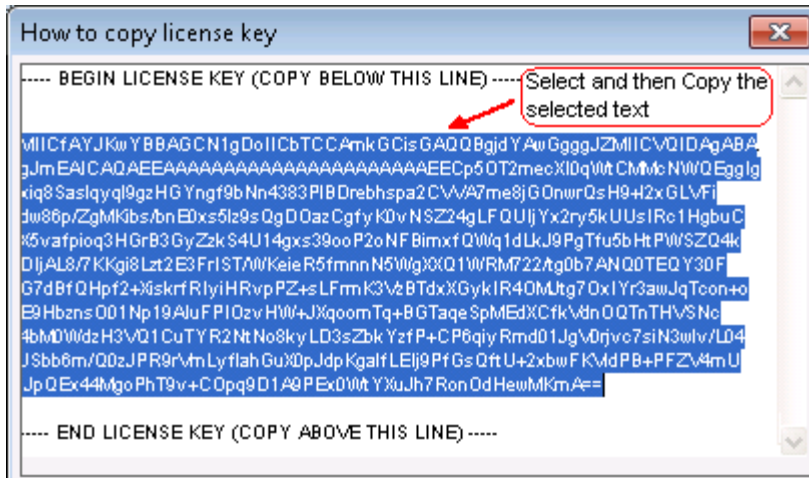

### Register screen

Perform the following steps to activate the software:

1. Download evaluation/trial copy of software from the respective product page available in our website at <http://www.vyapin.com/>
2. Install the software on the desired computer.
3. You will receive a license key through e-mail as soon as the purchase process is complete.
4. Click 'Activate' in File -> About -> Activate menu to see the Activate dialog (as shown in Image 1).
5. Copy the license key sent to you through email and paste it in the 'License Key' textbox. For help on how to copy the license key, click 'Click here to see how to copy and paste the license key' link in the Activate dialog (as shown in Image 2).

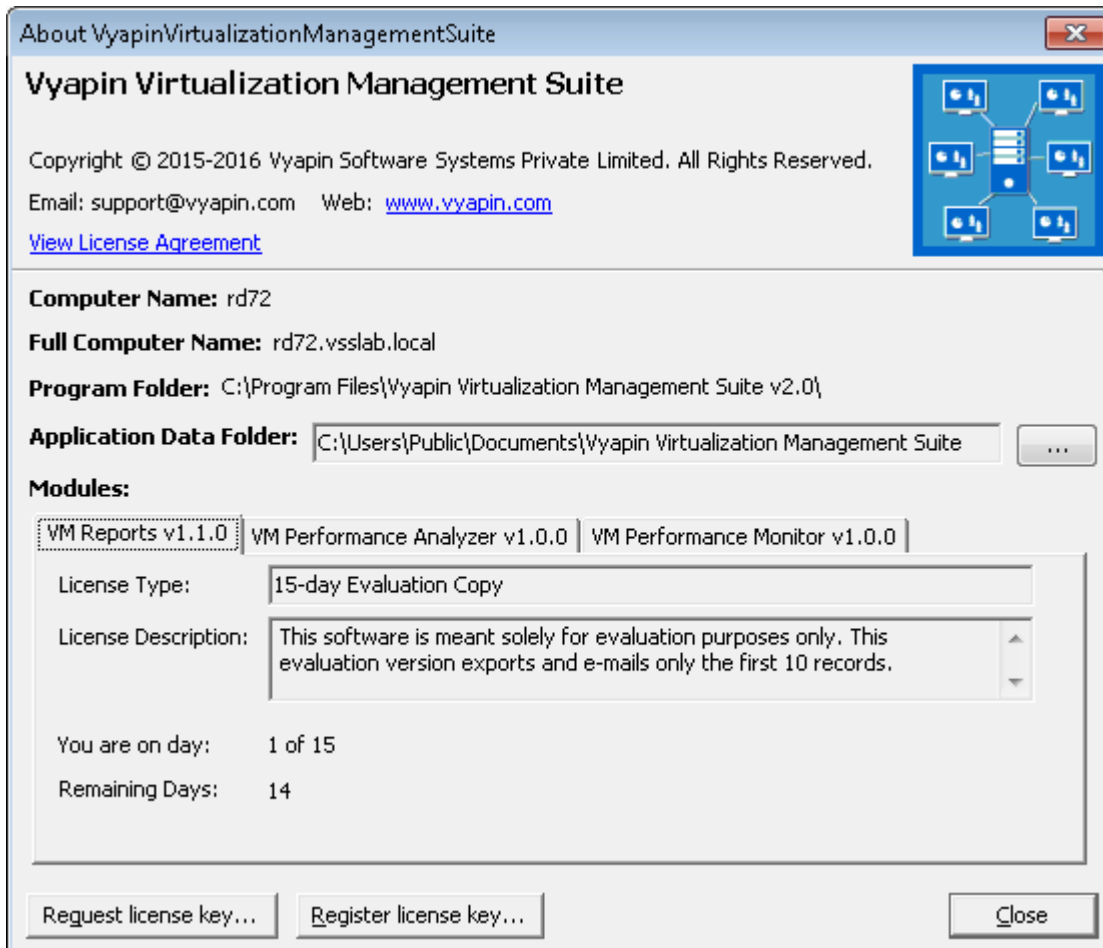

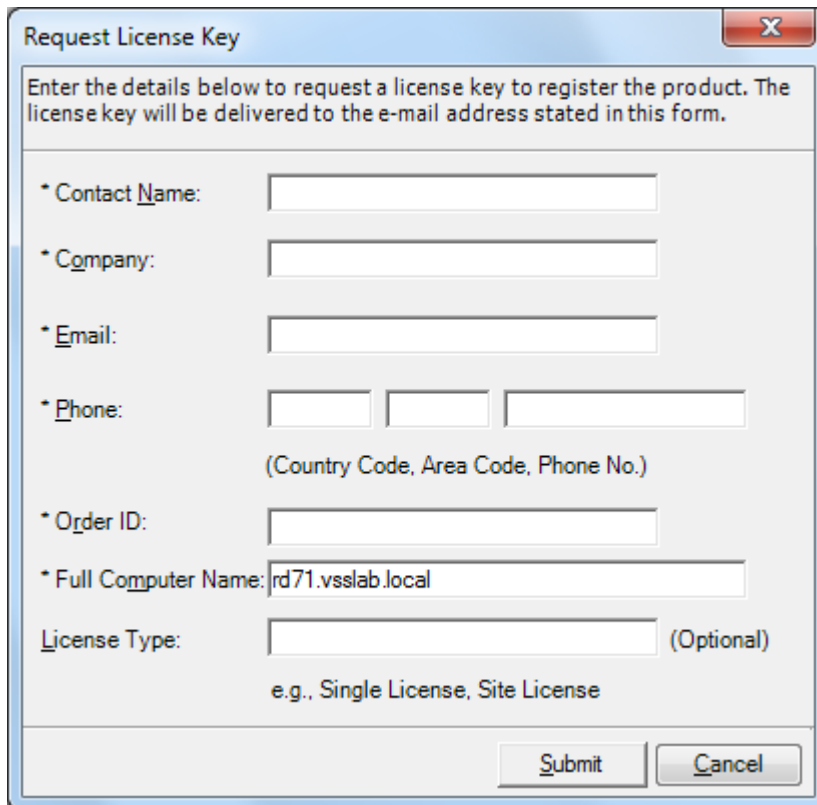

### How to copy license key screen?

#### Request License Key:

1. Select **Help -> About Vyapin Virtualization Management Suite** from File.
2. The **About Vyapin Virtualization Management Suite** dialog will appear as shown below:

Click **Request license key...** button. The Request License Key dialog will appear as shown below:

The image shows a 'Request License Key' dialog box with a title bar containing a close button (X). The dialog contains the following text and fields:

Enter the details below to request a license key to register the product. The license key will be delivered to the e-mail address stated in this form.

\* Contact Name:

\* Company:

\* Email:

\* Phone:     
(Country Code, Area Code, Phone No.)

\* Order ID:

\* Full Computer Name:

License Type:  (Optional)  
e.g., Single License, Site License

At the bottom right, there are two buttons: 'Submit' and 'Cancel'.

### Request License Key screen

Enter the following details and click Submit to place the license key request through email.

- **Contact Name:** End-user of the product.
- **Company:** End-user Company Name.
- **Email:** Email address where the license key has to be sent.
- **Phone:** Phone number with country code and area code.
- **Order ID:** Order/Transaction ID reference.
- **License Type:** License that was purchased.

## Technical Support

---

Vyapin Virtualization Management Suite Frequently Asked Questions (FAQ) section is available online at our website <http://www.vyapin.com>.

Please direct all technical support questions to [support@vyapin.com](mailto:support@vyapin.com). Include the following information to expedite a response:

- a) Include the version of the product you are using.
- b) If the problem is associated with installation, include the steps that led to the problem.
- c) If the problem is associated with usage, please state the series of steps you performed.
- d) Include the version of the OS, info about any service packs or hot-fixes and local language of the OS installed.
- e) Attach the Error Log File available in the common application data path of Vyapin Virtualization Management Suite (e.g., <Application Data Folder> \ Vyapin Virtualization Management Suite.Log).

**Note:**

<Application Data Folder> is the common area where Vyapin Virtualization Management Suite settings will be stored in the machine running Vyapin Virtualization Management Suite. The <Application Data Folder> can be found from the File -> About screen. The default path of <Application Data Folder> is as follows:

Windows 7, Windows 8, Windows 8.1, Windows Server 2008, Windows Server 2008 R2, Windows Server 2012, Windows Server 2012 R2 - C:\Users\Public\Documents\Vyapin Virtualization Management Suite

# Getting Started

---

## [Configuration Settings](#)

[Database Settings](#)

[Configuring Host Credentials](#)

[Add a host](#)

[Edit a host](#)

[Delete a host](#)

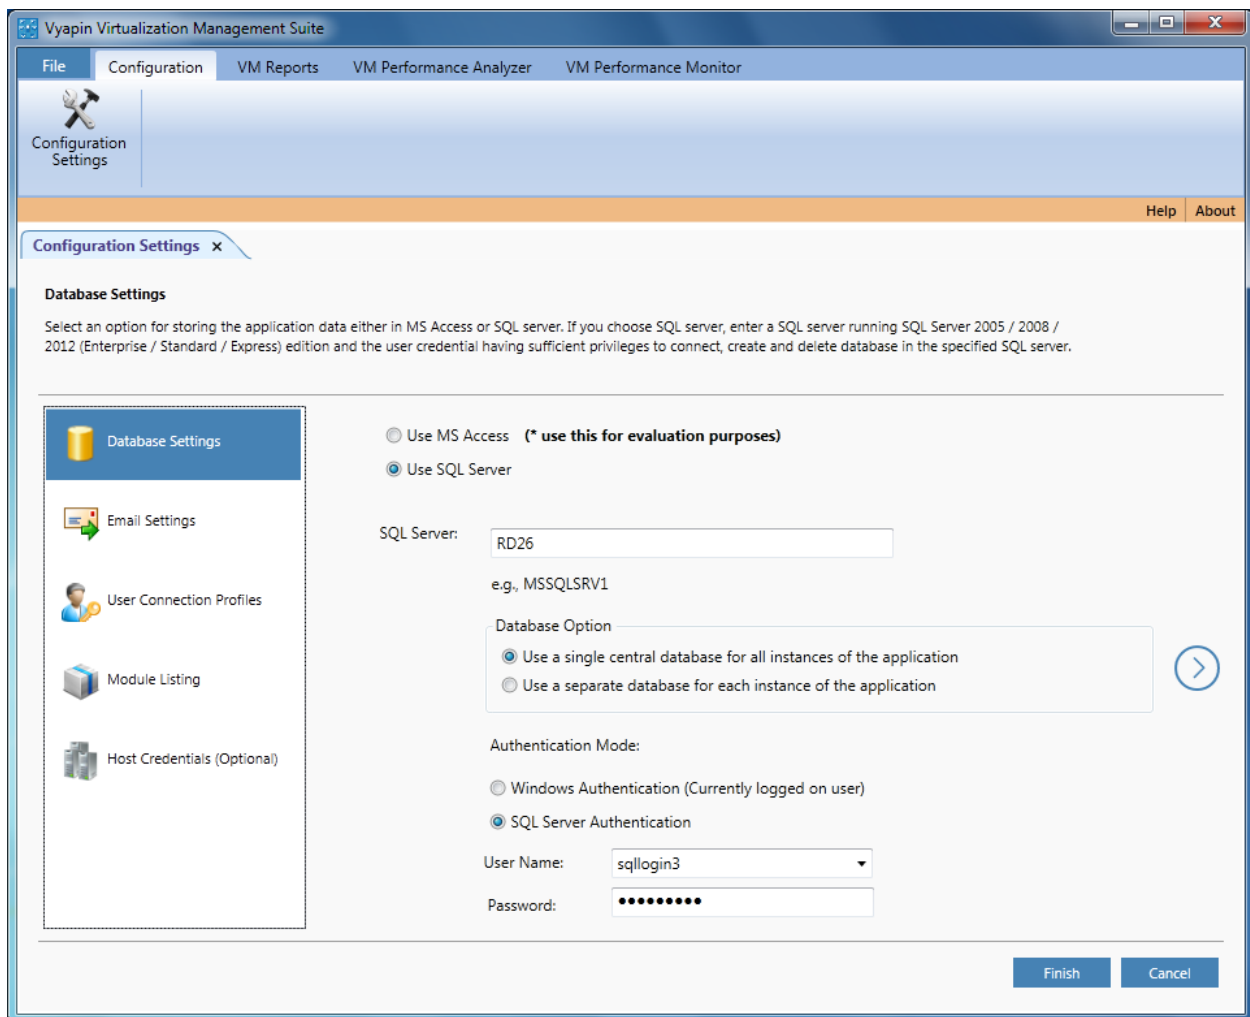

[Configure SMTP Server](#)

[User Connection Profiles](#)

## Database Settings

Vyapin Virtualization Management Suite may be configured to use either MS-Access MDB or SQL Server database for its data storage to generate reports. If you choose SQL server Vyapin Virtualization Management Suite requires an SQL Server running SQL Server 2005 / 2008 / 2012 (Enterprise / Standard / Express editions) to connect and create a new application database. Vyapin Virtualization Management Suite will connect to the specified SQL Server based on authentication mode and user credentials to manage its own application database.

You can access the Database settings by clicking **Configuration -> Configuration Settings** tab in the Vyapin Virtualization Management Suite main application window and choose Database settings, as shown below

## User Authentication

To connect to SQL Server, Vyapin Virtualization Management Suite uses the relevant user accounts based on the authentication mode as listed below:

- A. **Windows Authentication:** In this method, Vyapin Virtualization Management Suite uses the currently logged on user account while running reports
- B. **SQL Authentication:** In this method, Vyapin Virtualization Management Suite uses the specified SQL user account and password while running reports. Vyapin Virtualization Management Suite stores the SQL user name and password as a user profile in 'Stored User Names and Passwords' applet for its usage.

Read [User Connection Profiles](#) for more details.

**Note: Vyapin Virtualization Management Suite expects the user account to have sufficient privileges to create, add to and delete database in the SQL server.**

## Database creation

Vyapin Virtualization Management Suite creates databases in SQL Server based on the following database options (whichever is selected) as outlined below:

1. Use a single central database for all instances of the application

A new database will be created in the SQL server by the name Vyapin Virtualization Management Suite. Inside the Vyapin Virtualization Management Suite database, separate tables will be created for each installation of Vyapin Virtualization Management Suite. The table names will be prefixed with the computer name that is running Vyapin Virtualization Management Suite application. Thus, each installation of Vyapin Virtualization Management Suite will deploy its own tables based on the computer where Vyapin Virtualization Management Suite is installed. For example, if you install the software on 3 different computers, single database with 3 different tables will be created inside the single database and each installed application will generate reports separately independent of each other.

## 2. Use a separate database for each instance of the application

Vyapin Virtualization Management Suite creates a single application database in the default data storage location used by the SQL Server during application launch. Vyapin Virtualization Management Suite uses the following naming convention: VyapinVirtualizationManagementSuite-<COMPUTERNAME>, where COMPUTERNAME is the name of the computer running Vyapin Virtualization Management Suite.

For example, if the computer running Vyapin Virtualization Management Suite is 'CLIENT01', Vyapin Virtualization Management Suite creates 'Vyapin Virtualization Management Suite-CLIENT01' with data ('Vyapin Virtualization Management Suite-CLIENT01.mdf') and log ('Vyapin Virtualization Management Suite-CLIENT01\_log.LDF') files stored in the default SQL data folder in the SQL server (for example, C:\Program Files\Microsoft SQL Server\MSSQL.1\MSSQL\Data).

### **Database cleanup**

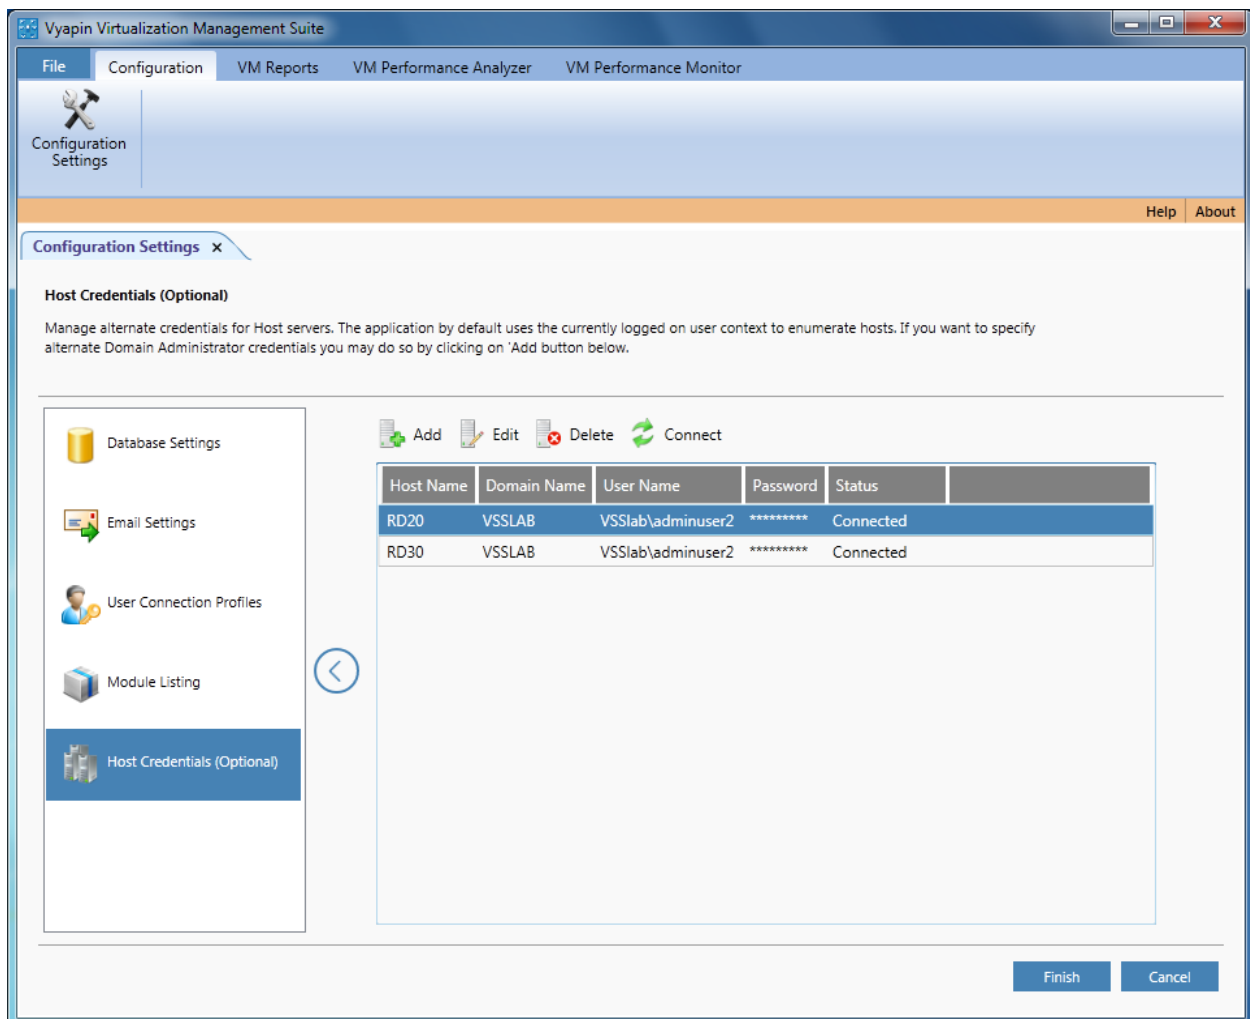

Vyapin Virtualization Management Suite will delete the application database while uninstalling the Vyapin Virtualization Management Suite application from the computer.

## Configure Host Credentials (Optional)

Manage alternate credentials for Host Servers. The application by default uses the currently logged on user context to enumerate Hyper-V Servers and its virtual machines and to collect report data. If you want to specify alternate Domain Administrator credentials you may use this option.

### Configuring Host Credentials (Optional)

You can access the Host Credentials settings by selecting the Host Credentials (Optional) option in the Configuration Settings window.

The various operations that can be performed in the Host Credentials screen are given below:

Operation	Description
Add	To Add a new host to the list.
Edit	To Edit the properties of a host in the list. Select a host and click Edit button.
Delete	To Delete a host from the list. Select a host and click Delete button.
Connect	To connect to a host in the list. Select a host and click Connect button.

## Add a Host

---

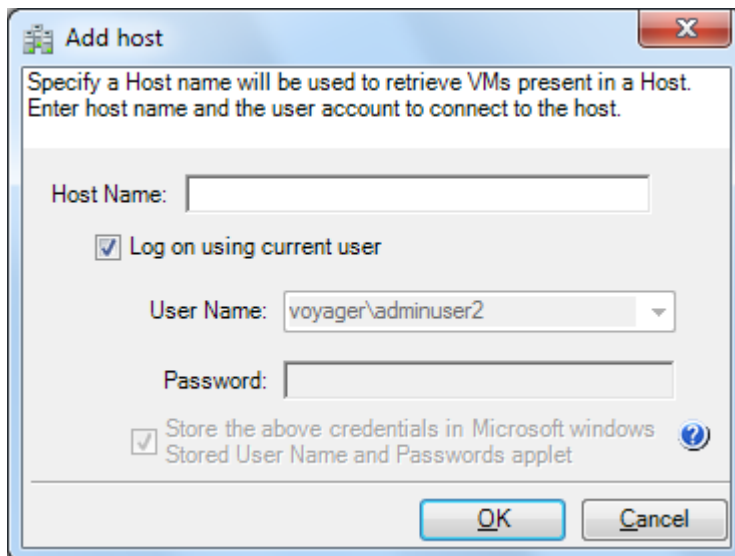

You may also add one single host at a time to the list of host in the credentials list by using Add Host feature.

### Add a domain to the list

1. [Launch Host Credentials \(Optional\)](#) window.

2. In the Host Credentials (Optional) window, click  Add button to add a domain to the list.

3. The New **Add Host** dialog will be displayed as shown below:

Specify a Host name will be used to retrieve VMs present in a Host.  
Enter host name and the user account to connect to the host.

Host Name:

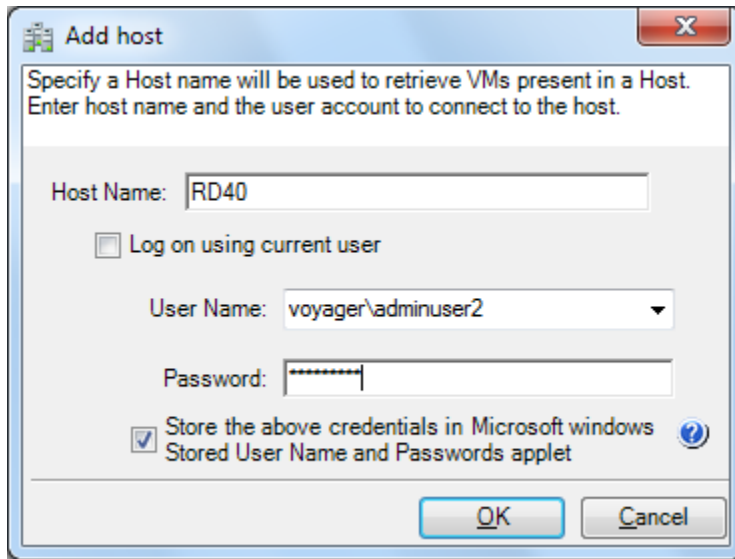

Log on using current user

User Name:

Password:

Store the above credentials in Microsoft windows  
Stored User Name and Passwords applet 

Enter the name of a host.

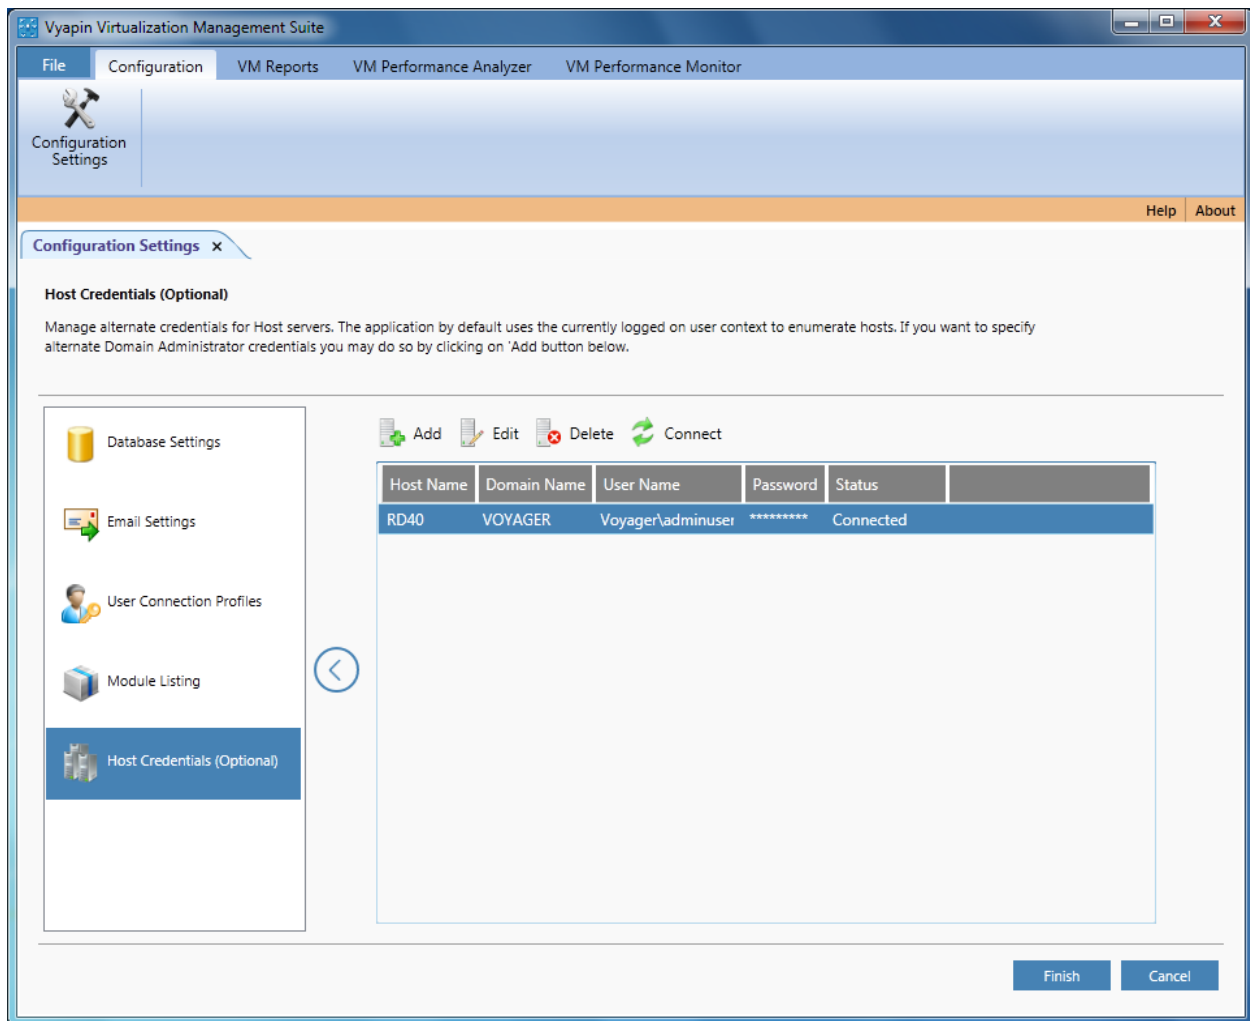

4. Specify user name and the corresponding password to connect to the specified host.

**Store the above user credential in Microsoft Windows Stored User Names and Passwords applet** - Vyapin Virtualization Management Suite allows the user to enter different user credentials to connect to the host. Uncheck the checkbox 'Log on using current user' if you like to connect to the host using a different user context.

Vyapin Virtualization Management Suite will store the user credential to connect to domain in the Microsoft Windows Stored User Names and Passwords applet / Credential Manager for security reasons. The stored user profile is tied to the user context (currently logged on user account) in which the profile is created.

5. Click OK to add the host to the Host Credentials list.
6. Vyapin Virtualization Management Suite will connect to the host with the newly provided connection parameters and add it to the list, upon successful connection to the Host.

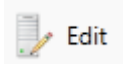

7. Click Cancel to abort the add process of the host to the Host Credentials list.

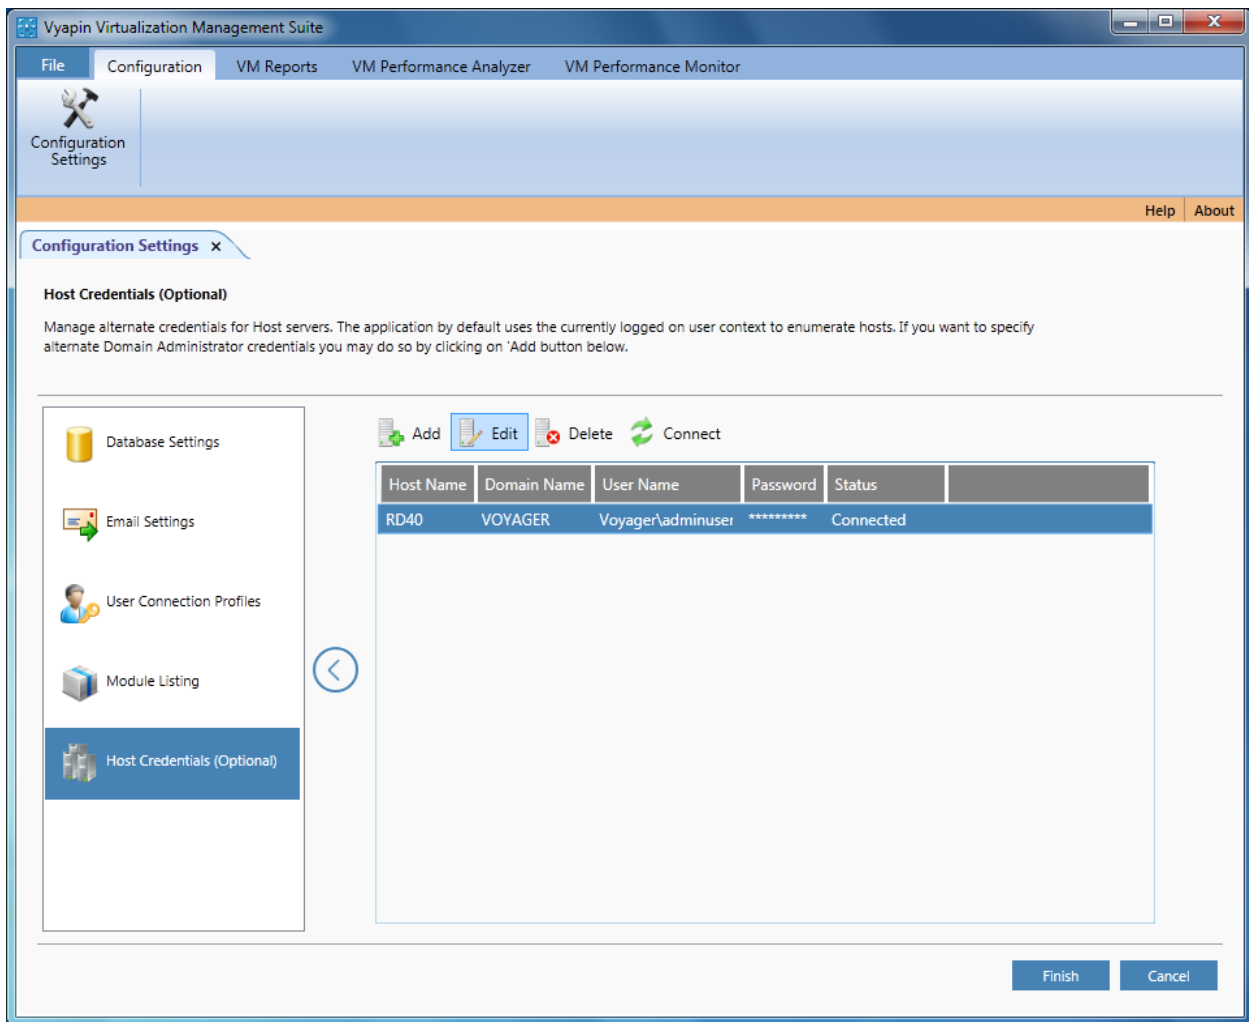

## Edit a Host

---

To Edit a host in the Host Credentials (Optional), follow the steps given below:

1. [Launch Host Credentials \(Optional\)](#) window.

2. In the Host Credentials (Optional) window, select any row (host), **Click**  **Edit** button to Edit an existing host in the list, as shown below:

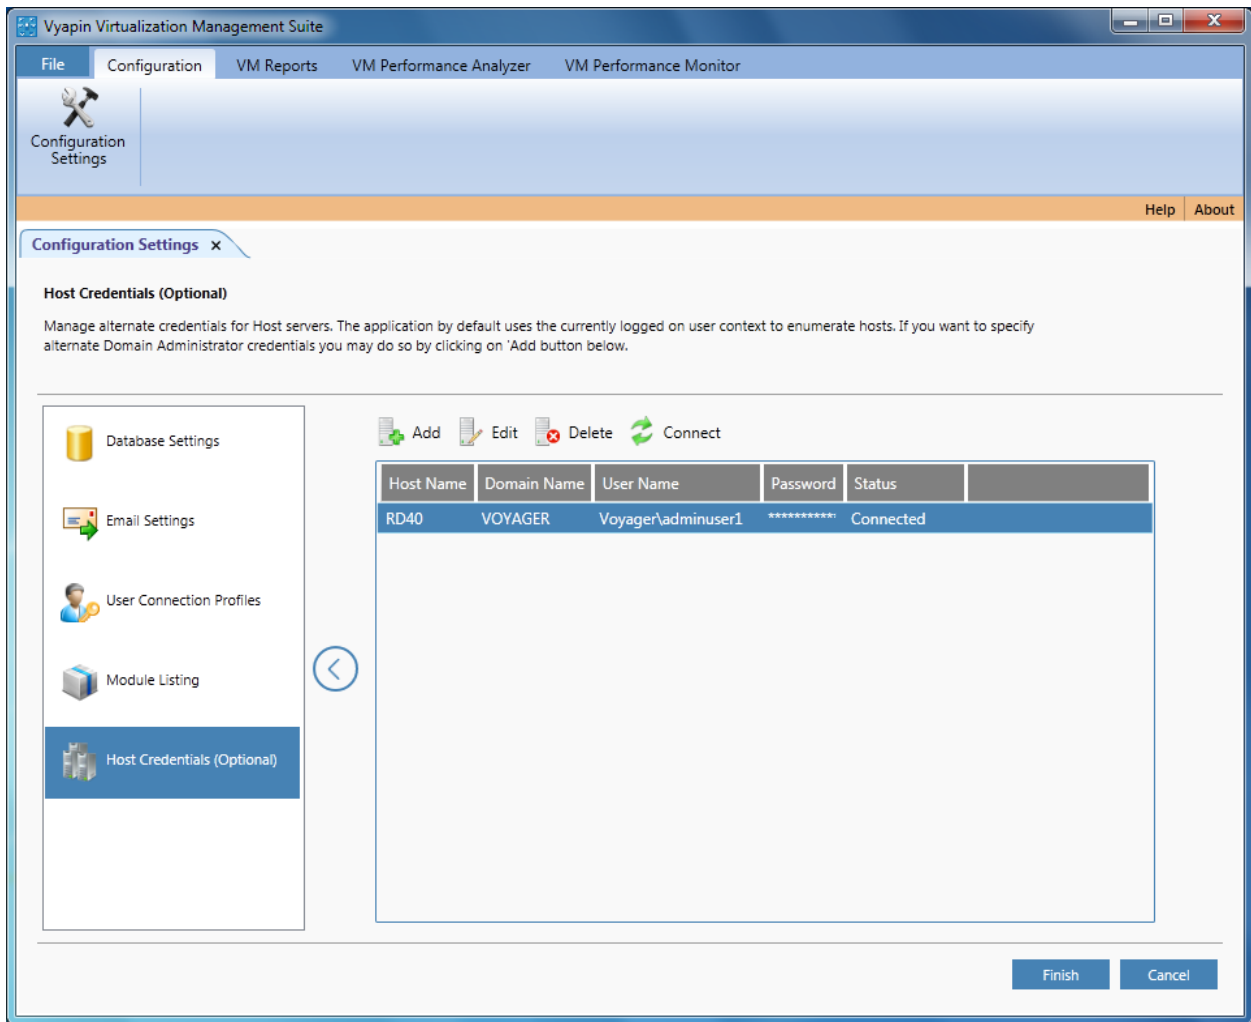

3. The host name cannot be modified during the edit operation.

4. Specify user name and the corresponding password to connect to the specified host.

5. **Click OK** to save and connect to the host with the newly provided connection parameters and update the host in the Host Credentials (Optional) list.

6. Vyapin Virtualization Management Suite will connect to the host with the newly provided connection parameters and modify it in the list, upon successful connection to the host.

7. **Click** Cancel to retain the existing connection parameters of the host in the Host Credentials list.

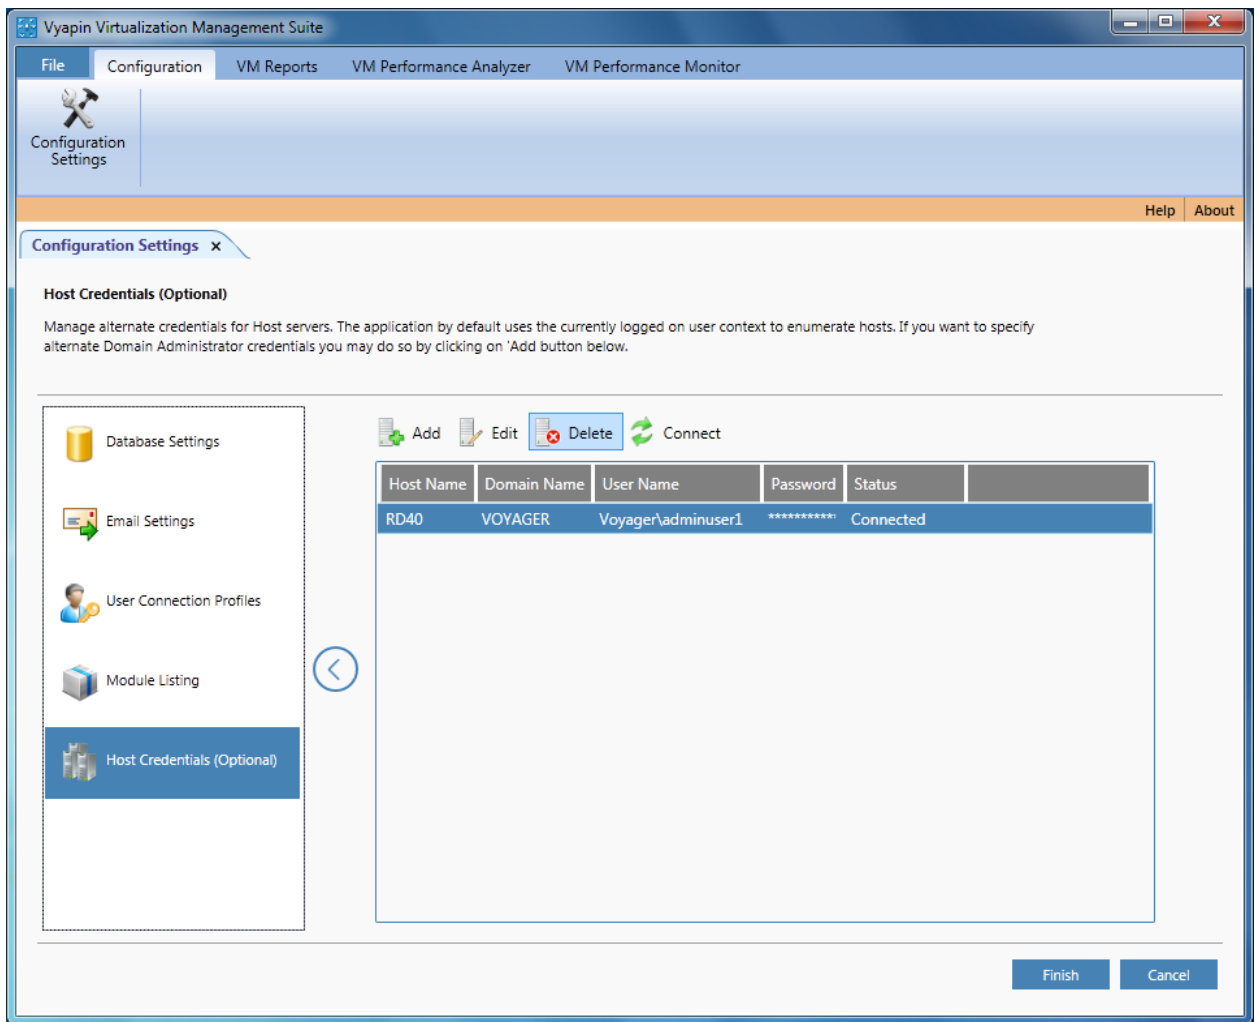

## Delete a Host

---

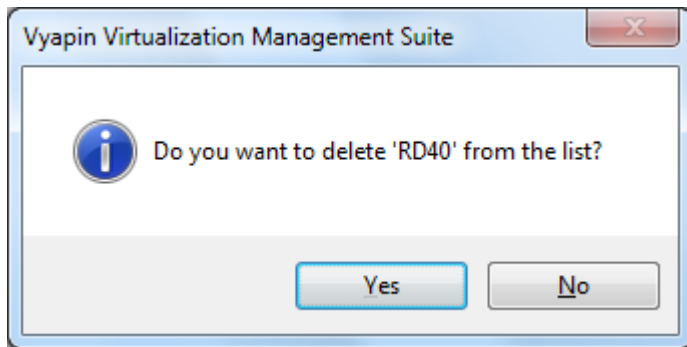

Perform the following steps to delete a host:

1. [Launch Host Credentials \(Optional\)](#) window.

2. In the Host Credentials (Optional) window, select any row (host), click  button to delete the host from the Host Credentials list.

3. An alert message asking for confirmation to delete the host will be displayed as shown below:

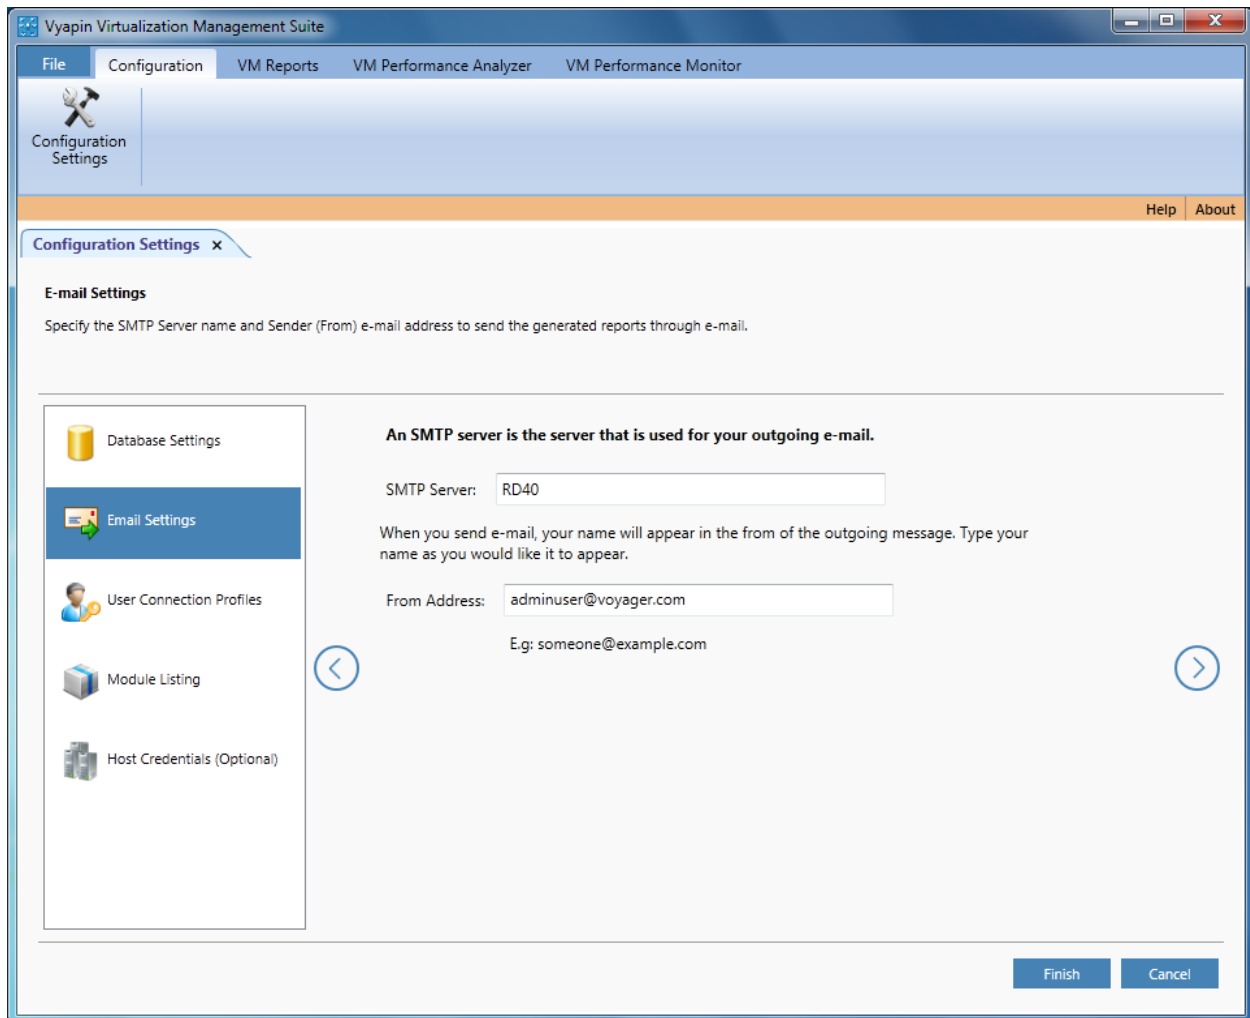

4. Click **Yes** to delete the selected host.
5. Click **No** to abort the delete process of the selected host.

## Configure SMTP Server

Vyapin Virtualization Management Suite provides the option to e-mail the reports generated. For e-mailing reports, Vyapin Virtualization Management Suite requires SMTP Server, From E-mail Address, To E-mail Addresses (recipients separated by semicolon) and the e-mail report format. Vyapin Virtualization Management Suite maintains a single SMTP Server and a From E-mail Address for use by all reports. You can specify a separate set of To e-mail addresses (recipients), e-mail report format, subject and body of the message for each reports.

You can set SMTP Server and From Address by clicking Configuration -> Configuration Settings tab in the Vyapin Virtualization Management Suite main application window, as shown below:

## User Connection profiles

---

Vyapin Virtualization Management Suite creates a user profile in **Windows Stored User Names and Passwords** applet / **Credential Manager**, in order to store the domain user context for enumerating servers using ADSI.

The stored user profile will be useful for generating reports using Vyapin Virtualization Management Suite under the following scenarios:

- Using an alternate user account to connect to the domain to retrieve servers using ADSI.
- Providing credentials that have sufficient rights to enumerate shares present in computers within a domain.

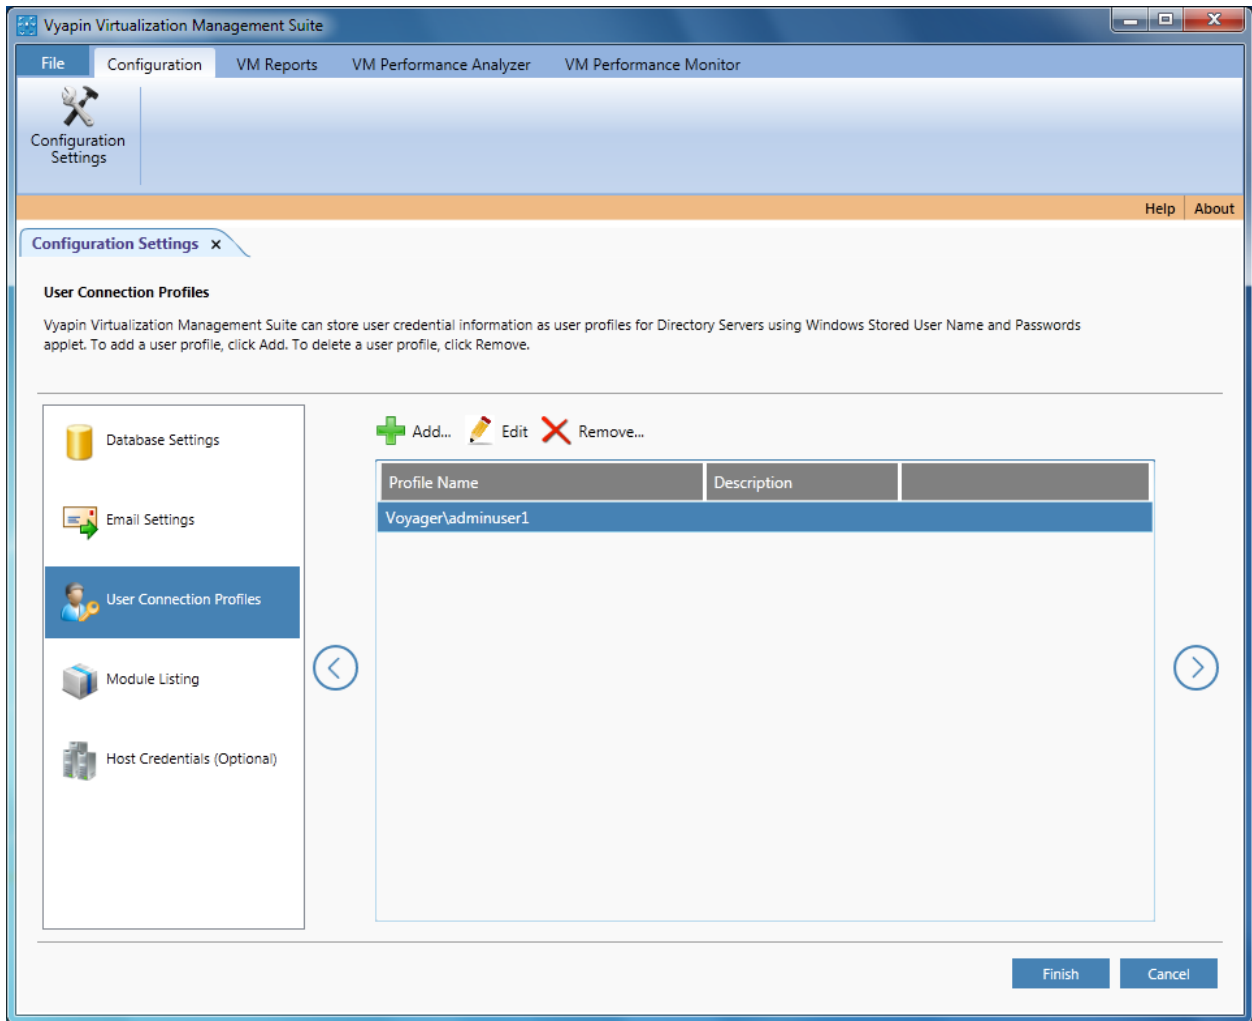

The stored user profile persists for all subsequent logon sessions on the same computer where Vyapin Virtualization Management Suite is installed. The stored user profiles are visible to the application under other logon sessions on the same computer.

The stored user profile created by Vyapin Virtualization Management Suite is restricted to the Windows User Profile context. If the Windows User Profile is maintained locally, Vyapin Virtualization Management Suite stored user profile is accessible only by the same user in the same computer. If the user who creates Vyapin Virtualization Management Suite stored user profile, has a Roaming user account in the enterprise, the Vyapin Virtualization Management Suite stored user profile can be accessed by the same user in any computer in the Windows enterprise.

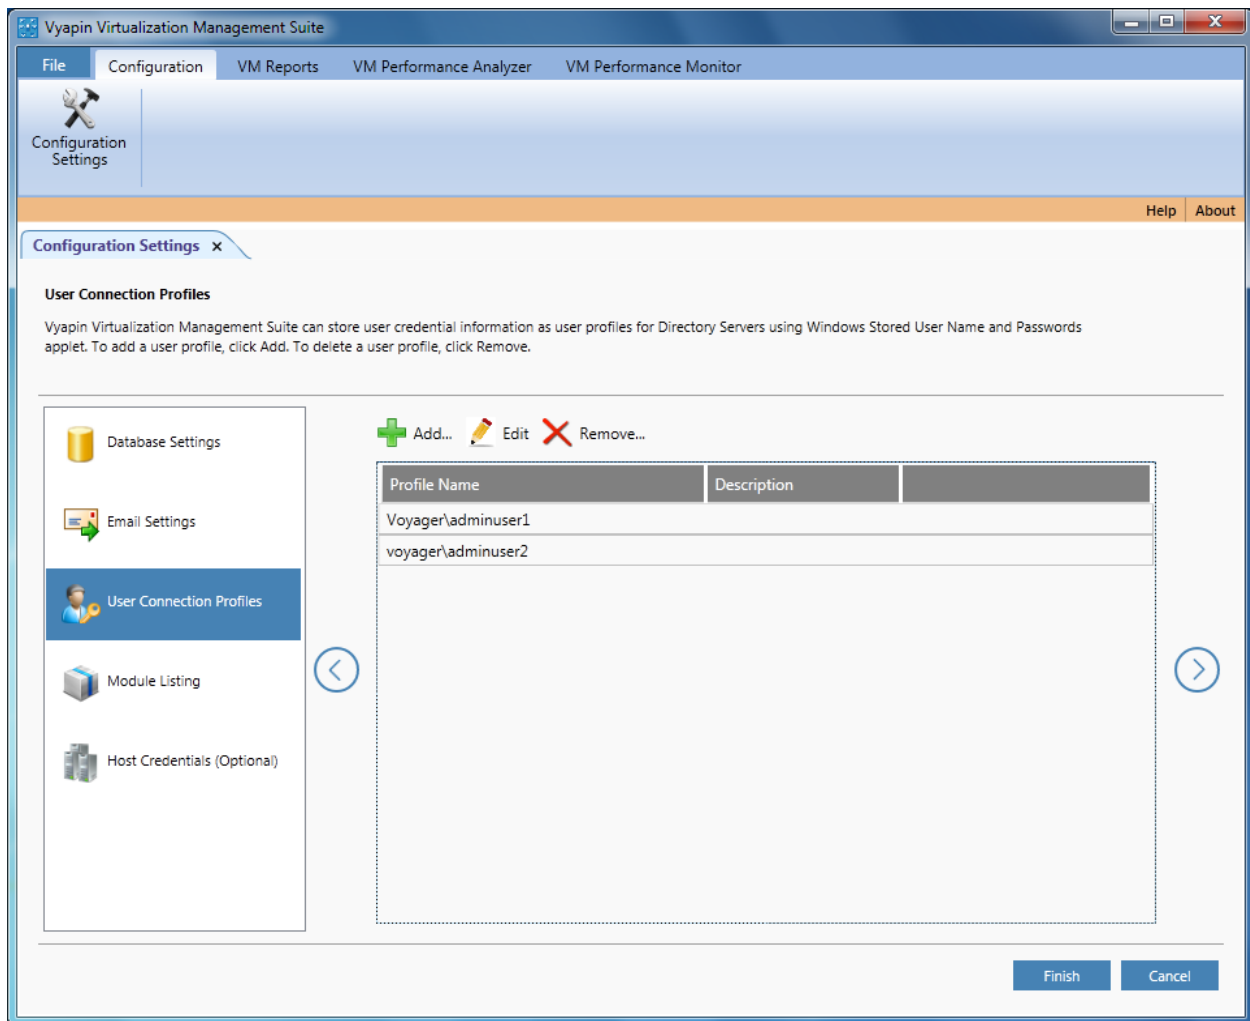

The stored user profile is a generic credential of **Windows Stored User Names and Passwords** applet / **Credential Manager** and can be used by the application only. The credential information is stored securely in an *256 bit encrypted format* in **Windows Stored User Names and Passwords** applet / **Credential Manager**.

The stored user profile corresponding to the user account will be used by the application in order to connect to the domain, if 'Use ADSI' is selected in Vyapin Virtualization Management Suite Enumeration Settings.

Using the Connection Profile dialog shown below, new profile can be created and available profiles can be removed from the profiles list.

Click **Add** button to add a new profile and a dialog will appear as shown below:

Click **Edit** button in the Connection Profile dialog to edit available profiles.

Click **Remove** button in the Connection Profile dialog to remove available profiles.

## About VM Reports

---

### Introduction

VM Reports Module is used to perform a complete scan for all installed VMs in your network. You can perform an automated inventory of VMs and their configuration at regular intervals and keep a constant watch on the health of your Hyper-V Servers.

Please be aware that the VM Reports Module uses WMI (Windows Management Instrumentation) to collect report data. Hence, all reports require WMI to be installed and enabled on the Hyper-V host server and its VMs. For more information, refer to "Prerequisites and Initial Configuration" section.

### Prerequisites and Initial Configuration

The VM Reports Module uses WMI to collect report data. WMI uses DCOM protocol and is affected by Windows Firewall and DCOM security settings. In order to generate the reports both Windows Firewall and DCOM must be properly configured. Windows Firewall and DCOM, when not properly configured on your remote computers, can cause errors such as an "RPC Server Unavailable" error or an "Access is denied" error. Also, ensure that the current user context or specified user context, under which the application runs, is a local administrator on target computers.

In order to generate the reports ensure the following settings are set appropriately:

- Remote Administration setting is enabled on Windows Firewall. By default, Windows Firewall blocks all unsolicited incoming traffic except for Group Policy. This is a common issue you might encounter while generating the reports. To resolve this issue, you need to enable the remote administration setting on the Firewall. For more information about configuring the Windows Firewall connections with a script, see <http://www.microsoft.com/technet/community/columns/scripts/sg1104.msp#EJAA>.
- WMI is installed and the Startup Type for WMI service is set to Automatic and the service is running under Local System Account.
- DCOM is enabled and ensure that security settings for DCOM allow remote connections
  1. Run the DCOM Configuration Utility (dcomcnfg.exe)
  2. In the **Component Services** dialog box, expand **Component Services**, expand **Computers**, and then right-click **My Computer** and click **Properties**
  3. In the **My Computer Properties** dialog box, click the **Default Properties** tab
  4. Select **Enable Distributed COM on this computer**
  5. The **Default Authentication Level** is set to **Connect** and the **Default Impersonation Level** is set to Identify in Windows XP and later operating systems. For Windows NT, however, the **Default Authentication Level** is set to **Connect** and **Default Impersonation Level** is set to **Impersonate**
  6. The default DCOM security settings for **Access Permissions** and **Launch and Activation Permissions** in the **COM Security** tab in the **My Computer Properties** dialog includes at least INTERACTIVE, SYSTEM and Administrators

- In Windows XP SP2 and later operating systems the SERVICE account is granted **Impersonate a client after authentication** right under **User Rights Assignment** under **Local Policies**
- The **Data Execution Prevention** in Windows XP SP2 and Windows 2003 SP1 is enabled for essential windows programs only.

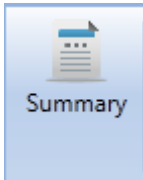

## System Info Reports

The VM Reports Module provides reports on the following resource categories:

- [Summary](#)
- [Memory](#)
- [Networking](#)
- [Processor](#)
- [Replication](#)
- [Current Status](#)
- [Snapshots](#)
- [Virtual Hard Disks](#)
- [Integration Services](#)
- [DVD Drives](#)
- [All VM Settings](#)

## How to view Summary Reports?

Click on  under VM Reports to view Summary information available under each tab as listed below.

Click **Summary** tab to view the following information: **Host Name, VM Name, VM State, Created Date, Notes, Heartbeat, Number of Processors, Guest Operating System, DNS Name.**

The screenshot shows a software interface with a "Discovery" window. It has two tabs: "Summary" (selected) and "Management". Below the tabs are icons for Refresh, Export, Filter, Customize, and Email. A table displays VM information with the following columns: Host Name, VM Name, State, Created Date, Notes, Heartbeat, Number of Processors, Guest Operating System, DNS Name, and Status Recorded as on.

Host Name	VM Name	State	Created Date	Notes	Heartbeat	Number of Processors	Guest Operating System	DNS Name	Status Recorded as on
RD40	RD74	Turned off	4/23/2014 3:10:18 PM			1			11/21/2015 11:19:04 AM

## How to view Memory Reports?

Click on  under VM Reports to view Memory information available under each tab as listed below.

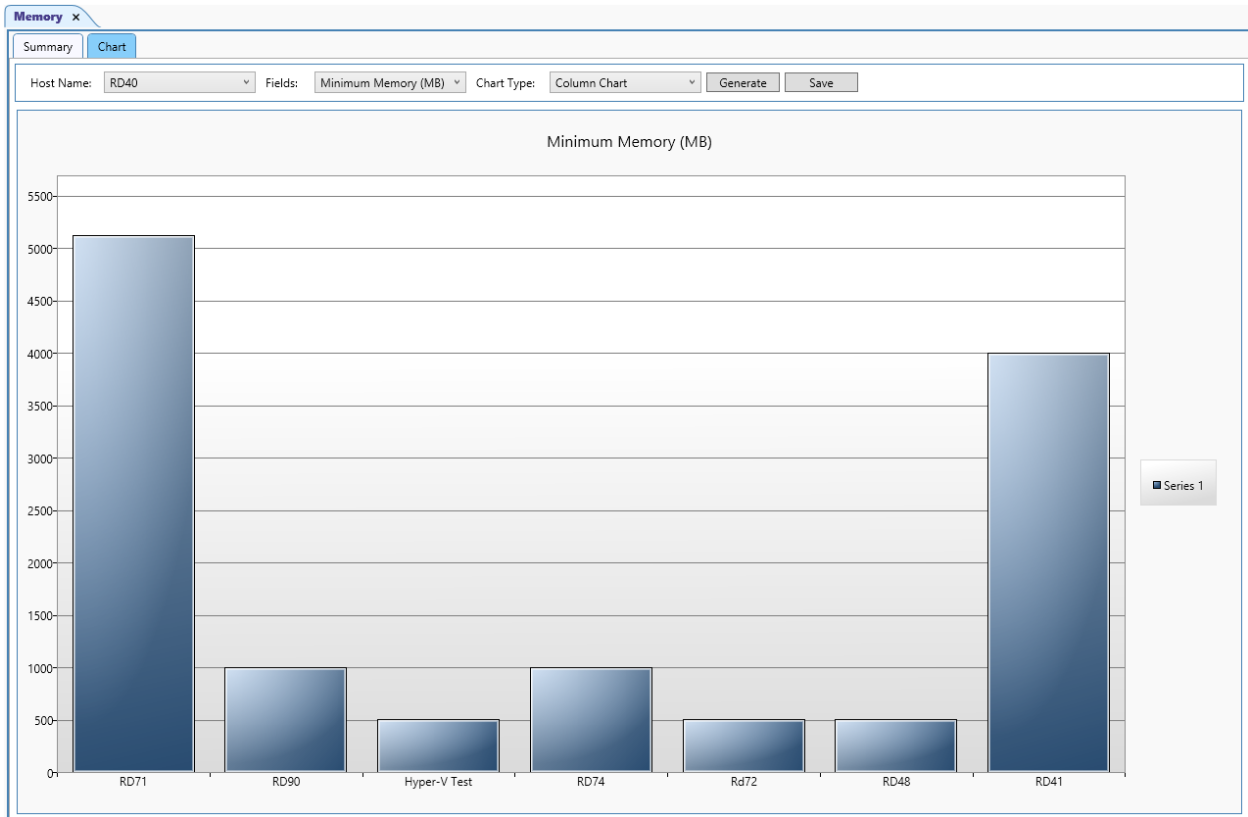

Click **Summary** tab to view the following information: **Host Name, VM Name, State, Startup Memory (MB), Dynamic Memory Enabled, Minimum Memory (MB), Maximum Memory (MB), Assigned Memory (MB), Memory Demand (MB), Status, Memory Buffer (%), Memory Weight, Status Report as on.**

The screenshot shows a web interface for viewing memory reports. At the top, there is a tab labeled "Memory" with a sub-tab "Summary" selected. Below the tabs are several action buttons: Refresh, Export, Filter, Customize, and Email. The main content is a table with the following columns: Host Name, VM Name, State, Startup Memory (MB), Dynamic Memory, Minimum Memory, Maximum Memory, Assigned Memory, Memory Demand, Status, Memory Buffer (%), and Status Recorded as on. The table contains eight rows of data.

Host Name	VM Name	State	Startup Memory (MB)	Dynamic Memory	Minimum Memory	Maximum Memory	Assigned Memory	Memory Demand	Status	Memory Buffer (%)	Status Recorded as on
RD40	RD71	Running	5120	True	5120	6000	5120	1382	OK	20	11/21/2015 11:31:54 AM

RD40	RD41	Running	4000	True	4000	7168	5822	4890	OK	20	11/21/2015 11:31:57 AM

Click **Chart** tab to view the following information:

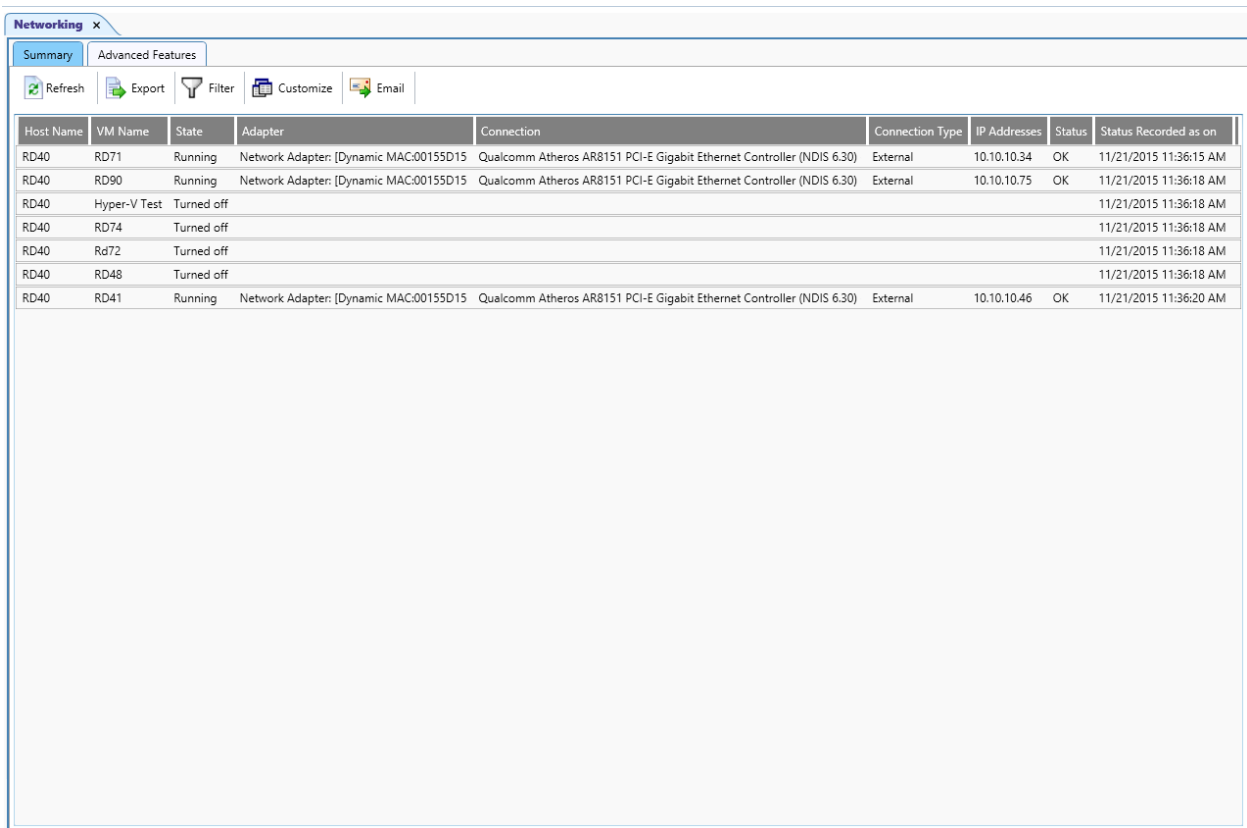

## How to view Networking Reports?

Click on **Networking** under VM Reports to view Networking information available under each tab as listed below.

Click **Summary** tab to view the following information: **Host Name, VM Name, State, Adapter, Connection, Connection Type, IP Address, Status, Status Recorded as on.**

Host Name	VM Name	State	Adapter	Connection	Connection Type	IP Addresses	Status	Status Recorded as on
RD40	RD71	Running	Network Adapter: [Dynamic MAC:00155D15	Qualcomm Atheros AR8151 PCI-E Gigabit Ethernet Controller (NDIS 6.30)	External	10.10.10.34	OK	11/21/2015 11:36:15 AM
RD40	RD90	Running	Network Adapter: [Dynamic MAC:00155D15	Qualcomm Atheros AR8151 PCI-E Gigabit Ethernet Controller (NDIS 6.30)	External	10.10.10.75	OK	11/21/2015 11:36:18 AM
RD40	Hyper-V Test	Turned off						11/21/2015 11:36:18 AM
RD40	RD74	Turned off						11/21/2015 11:36:18 AM
RD40	Rd72	Turned off						11/21/2015 11:36:18 AM
RD40	RD48	Turned off						11/21/2015 11:36:18 AM
RD40	RD41	Running	Network Adapter: [Dynamic MAC:00155D15	Qualcomm Atheros AR8151 PCI-E Gigabit Ethernet Controller (NDIS 6.30)	External	10.10.10.46	OK	11/21/2015 11:36:20 AM

Click **Advanced Features** tab to view the following information: **Host Name, VM Name, MAC Address Spoofing, DHCP guard, Router guard, Mirroring Mode, NIC Teaming, Status Recorded as on.**

## How to view Processor Reports?

Click on  under VM Reports to view Processor information available under each tab as listed below.

Click **Summary** tab to view the following information: **Host Name, VM Name, State, Number of Processor, Characteristics, Status, LoadPercentage, Virtual machine reserve (Percentage), Virtual machine limit(Percentage), Relative weight, Status Recorded as on.**

The screenshot shows a web interface for viewing processor reports. At the top, there are three tabs: "Summary" (selected), "NUMA Topology", and "Configuration". Below the tabs are several action buttons: "Refresh", "Export", "Filter", "Customize", and "Email". The main content is a table with the following data:

Host Name	VM Name	State	Number of Processors	Characteristics	Status	LoadPercentage	Virtual machine reserve (Percentage)	Virtual machine limit (Percentage)	Relative weight	Status Recorded as on
RD40	RD71	Running	1	64 bit capable	OK	3	0	100	0	11/21/2015 11:42:26 AM
RD40	RD90	Running	1	64 bit capable	OK	1	0	100	0	11/21/2015 11:42:27 AM
RD40	Hyper-V Test	Turned off								11/21/2015 11:42:27 AM
RD40	RD74	Turned off								11/21/2015 11:42:28 AM
RD40	Rd72	Running	4	64 bit capable	OK	1	0	100	0	11/21/2015 11:42:29 AM
RD40	RD48	Turned off								11/21/2015 11:42:30 AM
RD40	RD41	Running	1	64 bit capable	OK	5	0	100	0	11/21/2015 11:42:31 AM

Click **NUMA Topology** tab to view the following information: **Host Name, VM Name, State, MaxProcessorPerNumaNode, MaxMemoryPerNumaNode, MaxNumaNodesPerSocket, Status Recorded as on.**

Processor x

## How to view Replication Reports?

---

Click on **Replication** under VM Reports to view Replication information available under each tab as listed below.

Click **Summary** tab to view the following information: **Host Name, VM Name, State, Replication Type, Replication State, Replication Health, Current Primary Server, Current Replica Server, Last synchronized at, Status Recorded as on.**

The screenshot shows a web interface for viewing replication reports. At the top, there is a tab labeled "Replication" with a close button (x). Below the tab, there is a "Summary" sub-tab. A toolbar contains icons for Refresh, Export, Filter, Customize, and Email. The main content is a table with the following data:

Host Name	VM Name	State	Replication Type	Replication State	Replication Health	Current Primary Server	Current Replica Server	Last synchronized at	Status Recorded as on
RD40	RD71	Running	None	Disabled	NotApplicable				11/21/2015 11:45:09 AM

## How to view Virtual Hard Disk Reports?

Click on **Virtual Hard Disks** under VM Reports to view Virtual Hard Disks information available under each tab as listed below.

Click **Summary** tab to view the following information: **Host Name, VM Name, State, Hard Disk Name, Format, Type, Location, Maximum Disk Size (GB), Current File Size (GB), Parent Path.**

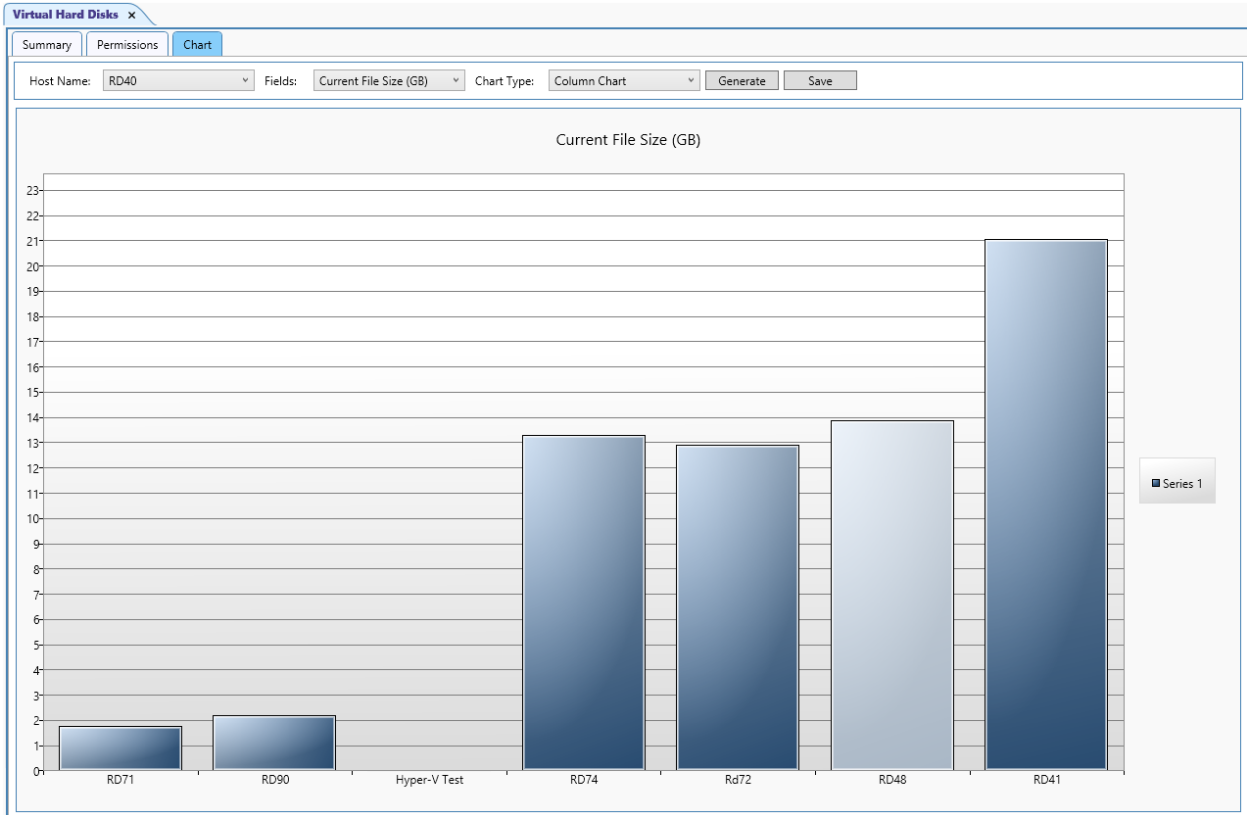

The screenshot shows a web-based interface for managing virtual hard disks. At the top, there are three tabs: "Summary" (selected), "Permissions", and "Chart". Below the tabs is a toolbar with icons for "Refresh", "Export", "Filter", "Customize", and "Email". The main area contains a table with the following columns: Host Name, VM Name, State, Hard Disk Name, Format, Type, Location, Maximum Disk Size, Current File Size (GB), Parent Path, and Status Recorded as on. The table lists several virtual hard disks for host RD40, including RD71, RD90, Hyper-V Test, RD74, Rd72, RD48, and RD41.

Host Name	VM Name	State	Hard Disk Name	Format	Type	Location	Maximum Disk Size	Current File Size (GB)	Parent Path	Status Recorded as on
RD40	RD71	Running	RD71_9A873379-F915-4	Vhdx	Differencing	D:\Vm Store\RI	40	1.765625	D:\Vm Store\RD71\RD71\Virtual Hard Dis	11/21/2015 11:57:40 AM

Click **Chart** tab to view the following information:

## How to view Integration Services Reports?

---

Click on **Integration Services** under VM Reports to view Integration Services information available under each tab as listed below.

Click **Summary** tab to view the following information: **Host Name, VM Name, State, Operating system shutdown, Time synchronization, Data Exchange, Heartbeat, Backup (Volume snapshot), Status Recorded as on.**

Host Name	VM Name	State	Operating system shutdown	Time synchronization	Data Exchange	Heartbeat	Backup (Volume snapshot)	Status Recorded as on
RD40	RD71	Running	Enabled	Enabled	Enabled	Enabled	Enabled	11/21/2015 1:16:04 PM
RD40	RD90	Running	Enabled	Enabled	Enabled	Enabled	Enabled	11/21/2015 1:16:04 PM
RD40	Hyper-V Test	Turned off						11/21/2015 1:16:04 PM
RD40	RD74	Turned off						11/21/2015 1:16:04 PM
RD40	Rd72	Running	Enabled	Disabled	Enabled	Enabled	Enabled	11/21/2015 1:16:04 PM
RD40	RD48	Turned off						11/21/2015 1:16:04 PM
RD40	RD41	Running	Enabled	Enabled	Enabled	Enabled	Enabled	11/21/2015 1:16:05 PM

## How to view DVD Drives Reports?

---

Click on **DVD Drives** under VM Reports to view DVD Drives information available under each tab as listed below.

Click **Summary** tab to view the following information: Host Name, VM Name, State, Mounted Media, Controller, Location, Status Recorded as on.

The screenshot shows a web interface for viewing DVD Drives reports. At the top, there is a 'DVD Drives' tab selected. Below the tab, there are several action buttons: Refresh, Export, Filter, Customize, and Email. The main content is a table with the following columns: Host Name, VM Name, State, Mounted Media, Controller, Location, and Status Recorded as on. The table contains seven rows of data.

Host Name	VM Name	State	Mounted Media	Controller	Location	Status Recorded as on
RD40	RD71	Running	C:\Karthik\en_windows_7_enterprise_with_sp1_x64_dvd_u_677651.iso	IDE Controller 1	Drive: 0	11/21/2015 1:17:12 PM
RD40	RD90	Running				11/21/2015 1:17:12 PM
RD40	Hyper-V Test	Turned off				11/21/2015 1:17:12 PM
RD40	RD74	Turned off	C:\Windows\system32\vmguest.iso	IDE Controller 1	Drive: 0	11/21/2015 1:17:13 PM
RD40	Rd72	Running				11/21/2015 1:17:13 PM
RD40	RD48	Turned off				11/21/2015 1:17:13 PM
RD40	RD41	Running				11/21/2015 1:17:13 PM

## How to view All VM Settings Reports?

Click on **All VM Settings** under VM Reports to view All VM Settings available under each tab as listed below.

# Schedule

---

[About Schedule Reports](#)

[Task Manager](#)

[How to Schedule Reports?](#)

## About Schedule Reports

---

**Vyapin Virtualization Management Suite** provides a powerful offline report generation feature called Schedule Report. Schedule Report allows the user to select multiple reports to be run for several hosts and VMs across the enterprise at scheduled intervals. The Schedule Report feature has the ability to export and/or e-mail the reports in different file formats.

Please note the following while using the Schedule Report Wizard:

- a) Scheduled reports will be created as a "task" in Windows Task Scheduler.
- b) The scheduled job will generate and export/email the reports in different file formats (HTML, CSV and XLSX) to the desired folder path/printer.
- c) By default, for each task, a sub-folder with the task name will be created under the specified export path. All selected Reports will be exported to a time-stamped sub-folder, in the format "yyyy-mm-dd hh.mm.ss", under the task name folder. Therefore, the full folder path for all the exported reports refers to the following directory: *<Export path><Task name><Time stamp>*.
- d) A separate file will be created for each report in the desired file format. For example, in the HTML file format, each report will be created as a .html file.

**Note:** Schedule Report Wizard will help you create and store the settings for a task, which you may view or modify later using the Scheduled Tasks Manager. The task will be created with the settings (Schedule Type and Run As parameter) provided using the Schedule Report Wizard. A valid password must be specified for the Run As parameter of the task.

## Schedule Task Manager

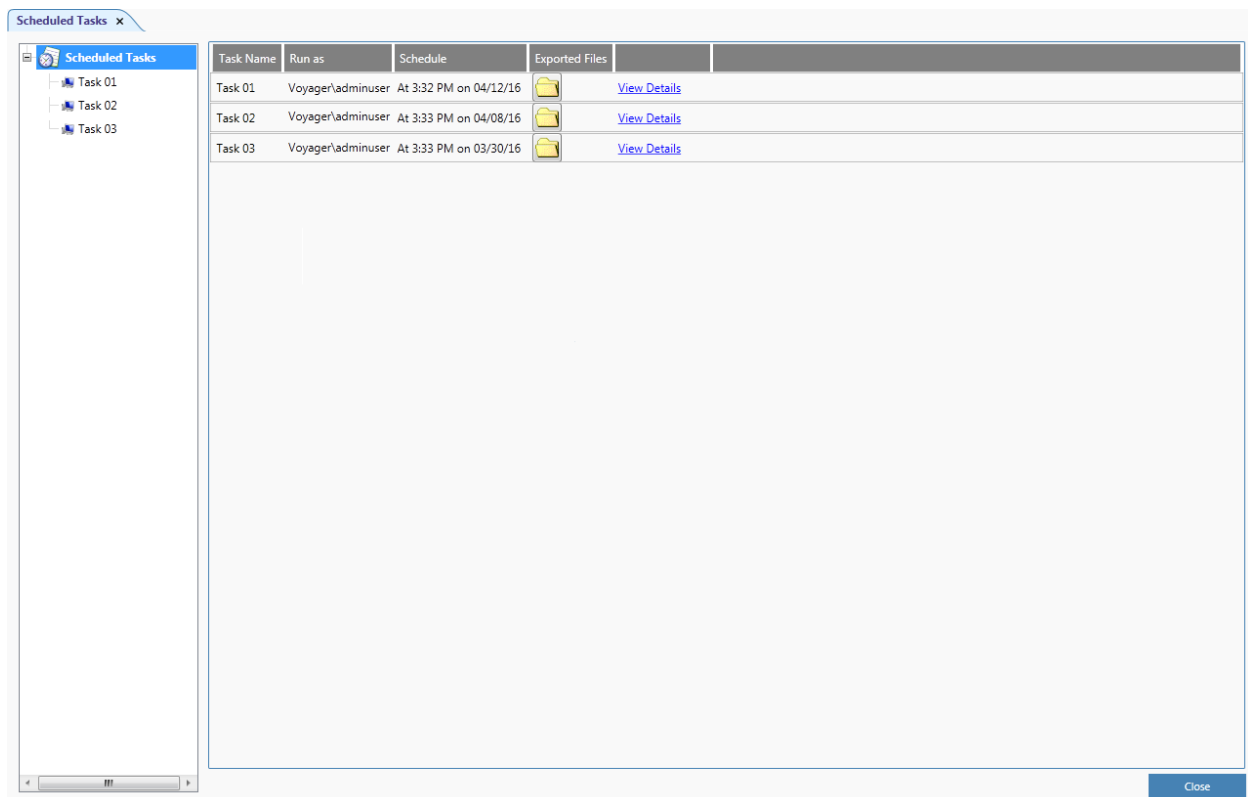

---

The Scheduled Tasks Manager allows you to perform the following operations:

- View summary information for the tasks created
- View exported files of the task
- Edit an existing task
- Delete a task

### View summary information of a task

The pane on the left hand side in the Scheduled Tasks Manager window lists the tasks maintained in Vyapin Virtualization Management Suite. To view summary information of a task, select the desired task on the left pane. The summary information of the selected task will be displayed in the right pane as shown below:

The task summary includes information about the task information, reports selected, export/e-mail settings.

### View exported files

To view the reports generated and exported by the task, perform either one of the following steps:

- Select **Scheduled Tasks** node on the left pane, and then click on the hyperlink in the **Exported Files** column in the right pane for the desired task.

## View Details

To view the details of the reports generated and exported folder path by the task, perform either one of the following steps:

- Select **Scheduled Tasks** node on the left pane, and then click on the **View Details** hyperlink in the right pane for the desired task.

OR

- Select the desired task on the left pane, and then click on the hyperlink next to Exported Files.

## Edit Task

1. Select a task from the Scheduled Tasks Manager Window and Click Edit Task.
2. Perform the steps as in [How to Schedule reports?](#) While proceeding through the wizard, you may change the settings, add a new report, delete a report, edit a report, change the export path etc.
3. The new settings will be used when the task runs the next time.

## Delete Task

To delete a task from the Scheduled Tasks Window, select the task and click Delete Task. The deleted task will be removed permanently from the Windows Task Scheduler.

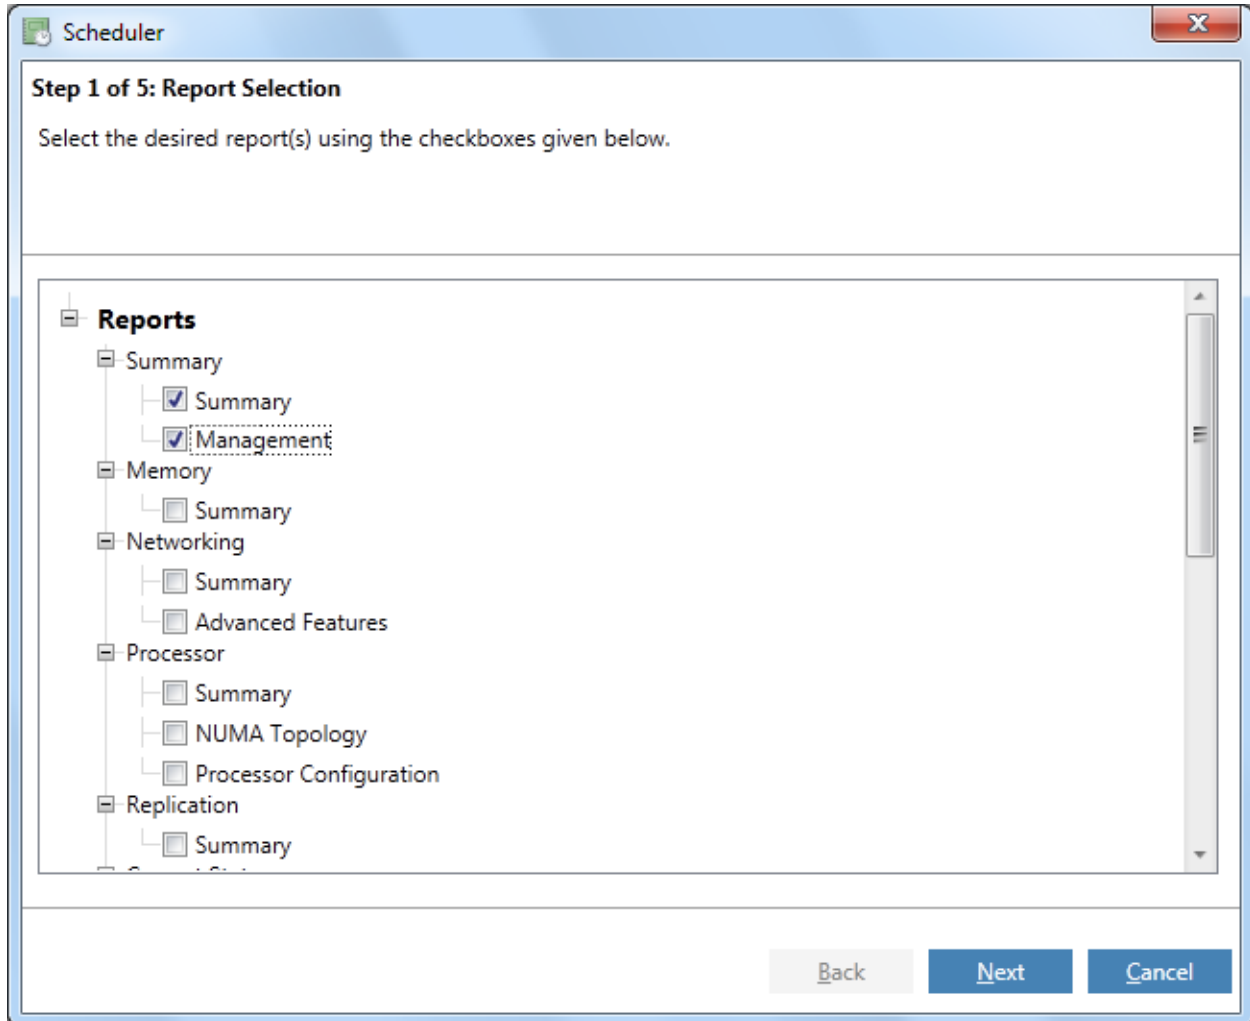

## How to Schedule Reports?

---

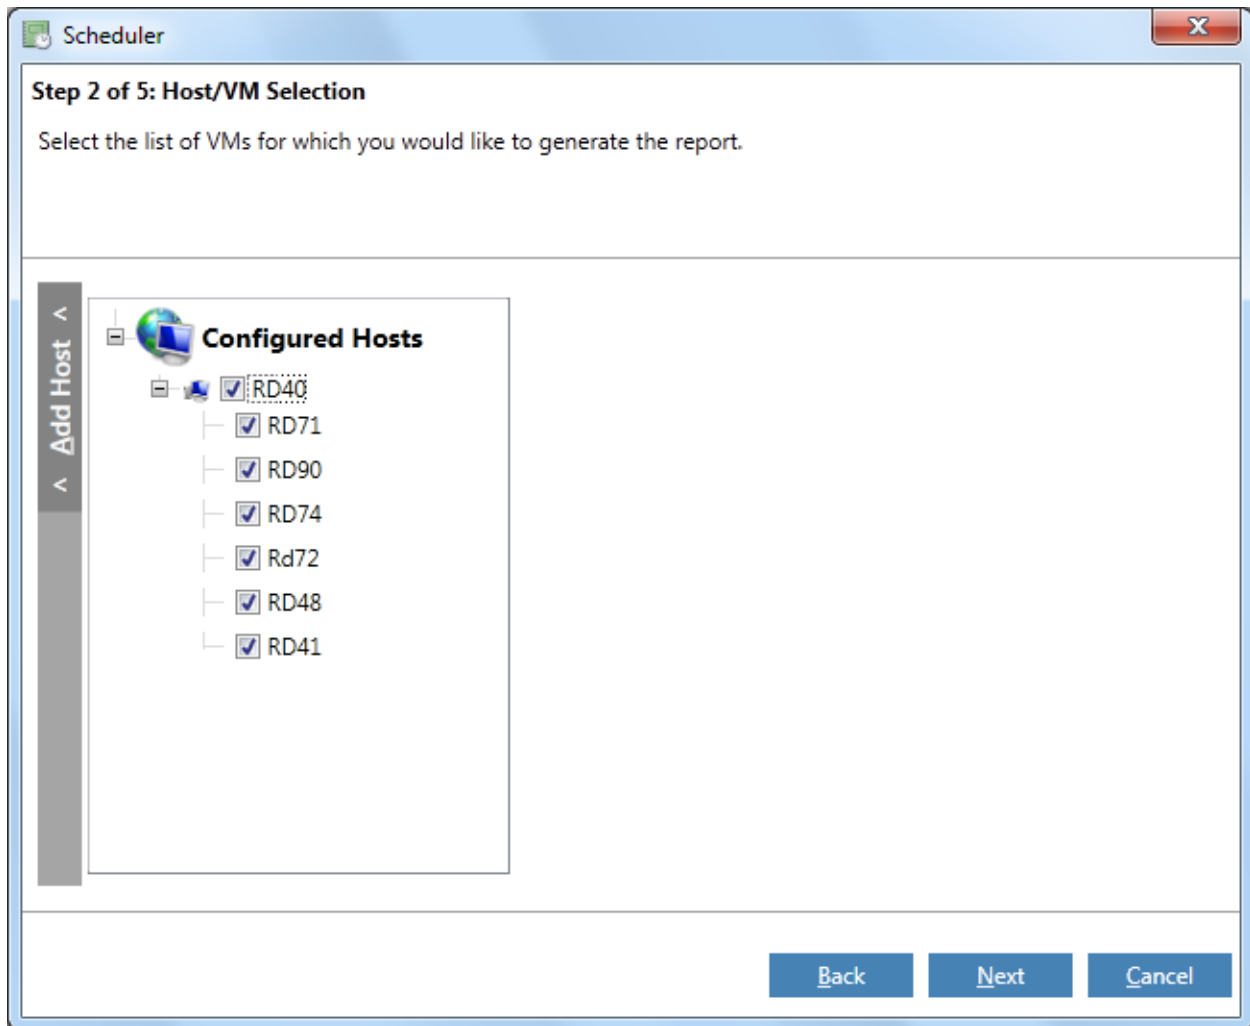

Select **Schedule Report** option under Reports. This will bring up the Schedule Report Wizard.

### Step 1: Report Selection

1. **Select** the report(s) using the checkboxes to the left of the reports. You may select any number of reports to run in a single task.
2. Click **Next** to proceed to the next step.

## Step 2: Host/VM Selection

1. Select the Hosts and VMs for which you wish to run the reports selected in Step 1.
2. Click Next to proceed to the Next step.

### Step 3: Delivery Options

**Step 3 of 5: Delivery Options**

Select the report delivery options. You can Export and E-mail the reports using the options below. In case of export option, for each task, a sub-folder with the task name will be created under the specified export path. All selected reports will be exported to a time-stamped folder in the format "yyyy-mm-dd hh.mm.ss" under the task name folder.

**Export Type:** HTML

**Export**

Export Path: C:\Users\Public\Documents\Vyapin \ ...

**Email**

To Address:   Additional E-mail Settings...

Compress the attachment

Back Next Cancel

1. Change the Export or E-mail settings as necessary.
2. Use Browse button to change the export path.
  - Click **Additional E-mail Settings** button to specify optional e-mail settings as shown below.

**Additional E-mail Settings** ✕

 You can customize the SMTP Server, From and To address, Subject and body of the e-mail message.

**S**SMTP Server:

**F**rom:

**T**o:

**S**ubject:

Please find the attached report generated by Vyapin Virtualization Management Suite

#### Step 4: Schedule Settings

The screenshot shows the 'Scheduler' window at 'Step 4 of 5: Schedule Settings'. The window title is 'Scheduler' and it has a close button (X) in the top right corner. The main text reads: 'Enter a unique task name and specify its schedule settings.' Below this, there are several input fields and controls:

- Task Name:** A text box containing 'Tasks 01'.
- Run As:** A text box containing 'voyager\adminuser3'.
- Password:** A text box filled with ten black dots.
- Schedule Task:** A dropdown menu set to 'Once'.
- Start time:** A time picker set to '12:56 PM'.
- Advanced:** A blue button next to the start time.
- Run on:** A date picker set to 'Monday, April 25, 2016' with a calendar icon showing the date '15'.

At the bottom of the window, there are three buttons: 'Back', 'Next', and 'Cancel'.

1. Enter a unique name for the task.
2. Change the Run as parameter, if necessary and set the password for the specified user.
3. Change the task schedule settings as required.
4. Click Next to proceed to the next and final step.

## Step 5: Summary

**Step 5 of 5: Summary**

Click Finish to save the task details.

**Task Name:** Tasks 01

**Run As:** voyager\adminuser3

**Schedule:** At 12:56 PM on 04/25/16

Report Name	Export As	Export Folder (Export Path\Task Name)
Sumamry-Summary	HTML	C:\Users\Public\Documents\Vyapin Virtualization Management Suite\Export
Sumamry-Management	HTML	C:\Users\Public\Documents\Vyapin Virtualization Management Suite\Export

Back Finish Cancel

1. This step displays the summary information of the task.
2. Click Finish to save the task details.
3. The task will be added to Windows Scheduled Tasks and will be displayed in the Scheduled Tasks Manager Window as shown below:

Scheduled Tasks x

**Scheduled Tasks**

[Data Collector](#)

[Live Performance Data](#)

[Performance Reports](#)

# Data Collector

---

[About Data Collector](#)

[How to configure a host and VM for data collection?](#)

## About Data Collector

---

The **Data Collector** feature provides the option to configure hosts and virtual machines for collecting their performance counter data at regular interval of time. Based on the setting, it collects the performance counter data to report any changes made to the host/virtual machine. Data Collector feature allows you to create a schedule task for a host and its virtual machines in a single task.

For more information about data collector, follow the links given below:

[How to configure a host and VM for data collection?](#)

How to configure a host and VM for data collection?

---

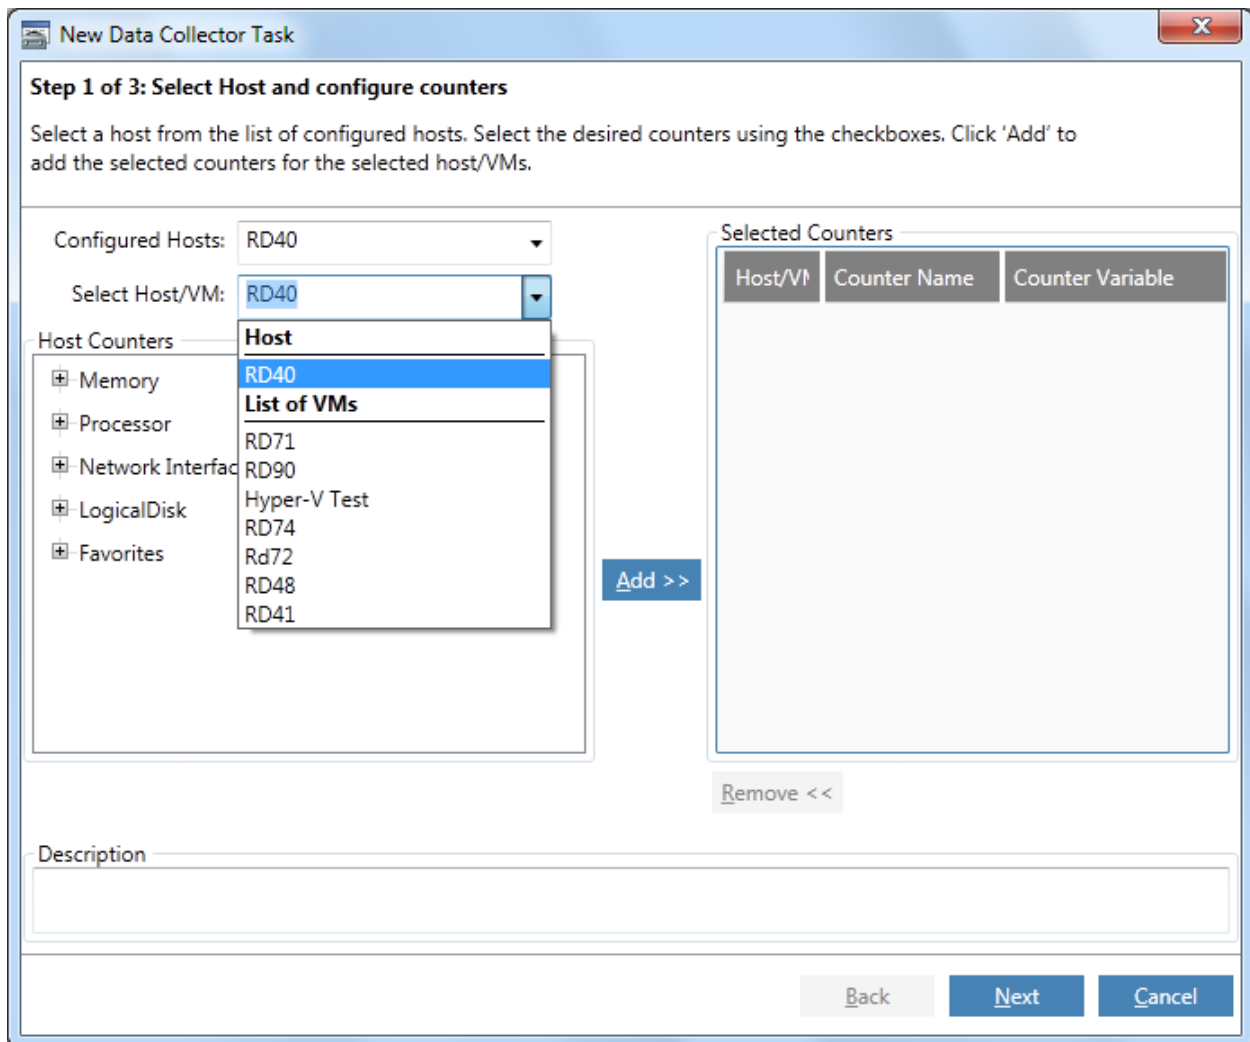

Click  under VM Performance Analyzer module. This will bring up the New Data Collector Task Wizard as displayed below:

### Step 1: Select Host and configure counters

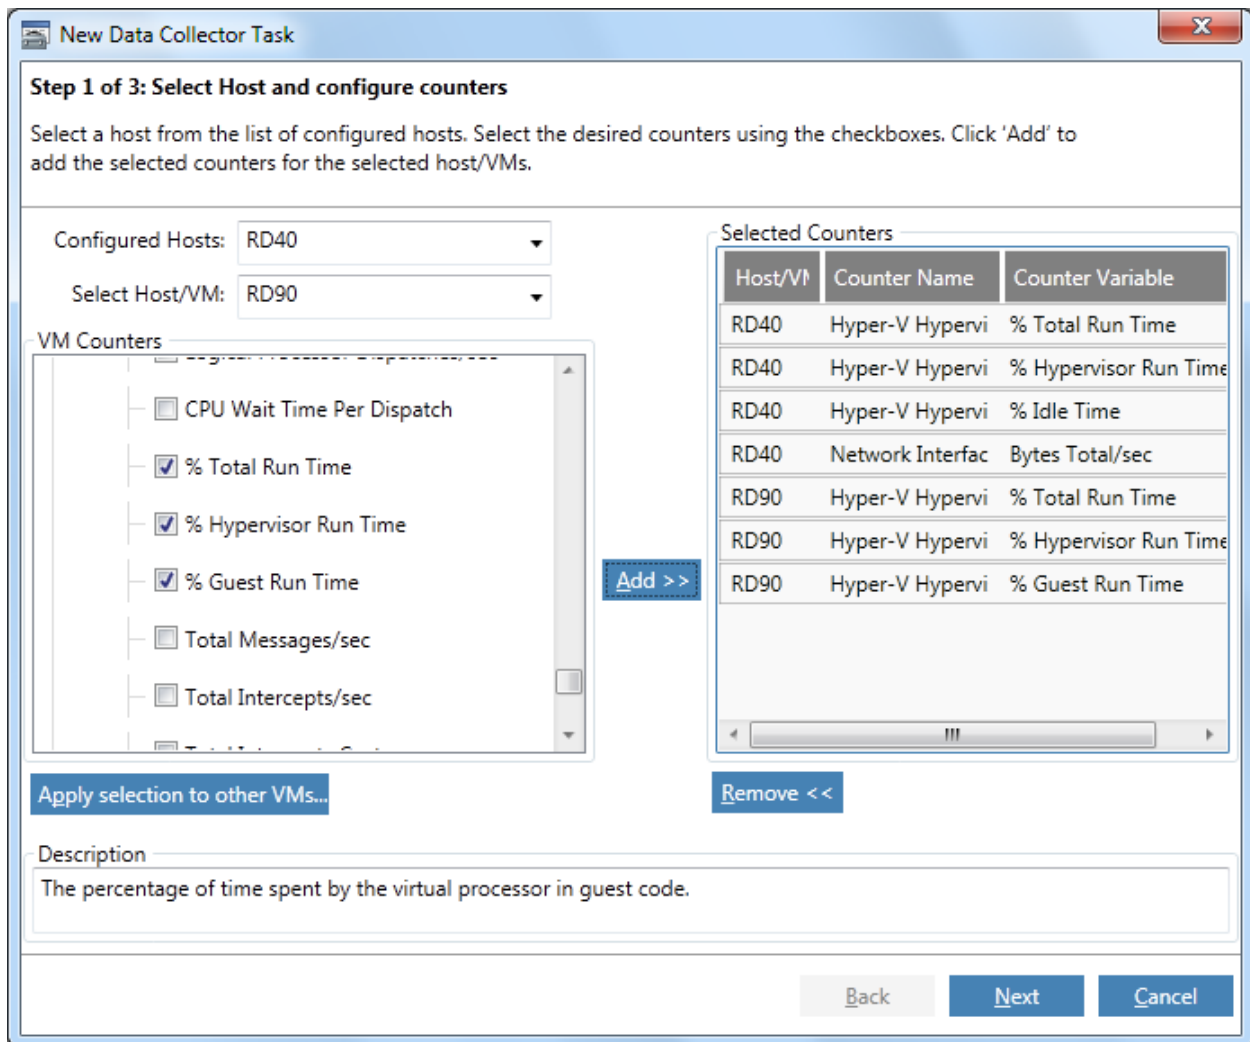

The screenshot shows a window titled "New Data Collector Task" with a close button in the top right corner. The main content area is titled "Step 1 of 3: Select Host and configure counters". Below the title, there is a paragraph of instructions: "Select a host from the list of configured hosts. Select the desired counters using the checkboxes. Click 'Add' to add the selected counters for the selected host/VMs." The interface is divided into several sections. On the left, there is a "Configured Hosts:" label followed by a dropdown menu showing "Select a Host". Below this is a "Select Host/VM:" label followed by a button that says "Click here to Add Host...". Underneath is a large empty rectangular box labeled "Host Counter". In the center, there is a blue button labeled "Add >>". On the right, there is a "Selected Counters" section containing a table with three columns: "Host/VM", "Counter Name", and "Counter Variable". The table is currently empty. Below the table is a grey button labeled "Remove <<". At the bottom of the window, there is a "Description:" label followed by a text input field. At the very bottom, there are three buttons: "Back", "Next", and "Cancel".

To configure a host for analysis, click [Click here to Add Host...](#) menu.

Select a host from the list of **Configured Hosts** drop-down. The list of VMs in the selected host will be displayed in the **Select Host/VM** drop-down, as shown below:

1. Select a host/VM. This will display the Performance counters for the selected host/VM in the tree view.
2. Select the desired counters using the checkboxes.
3. Click **Add >>** to add the selected counters for the selected host/VMs.

4. You may also use **Apply selection to other VMs...** option to apply the selected counters to the desired VMs.
5. Use **Remove <<** button to remove the selected counters.

Click **Next** to proceed.

**Step 2 of 3: Schedule data collection**

Enter a unique name for the data collection task and schedule the task.

Task Name:

Sample Interval:    Run At System Startup i

Schedule Task:  Start time:

Schedule Task Daily

Every  day(s)

1. Enter a unique name for the data collection task and schedule it.
2. Change the data collection task schedule settings as required.
3. Select a Sample Interval time at which the selected counters have to be collected.
4. Use **Run At System Startup** option as required. To set this option in the scheduled task, the currently logged on user to have administrative privileges. If User Access Control (UAC) is enabled and if the currently logged on user does not have administrative privileges, UAC prompt will appear to elevate the user's privileges.
5. Click **Next** to proceed to the final step.

### Step 3: Summary

1. This step displays the summary information of the task.

**New Data Collector Task**

**Step 3 of 3: Summary**  
Click Finish to save the task details.

**Task Name:** Tasks 01

**Schedule:** At 02:30 PM every day

Host/VM Name	Counter Name	Counter Variable
RD40	Hyper-V Hypervisor Logical Processor	% Hypervisor Run Time
RD40	Hyper-V Hypervisor Logical Processor	% Idle Time
RD40	Network Interface	Bytes Total/sec
RD90	Hyper-V Hypervisor Virtual Processor	% Total Run Time
RD90	Hyper-V Hypervisor Virtual Processor	% Hypervisor Run Time
RD90	Hyper-V Hypervisor Virtual Processor	% Guest Run Time

**Back** **Finish** **Cancel**

- Click **Finish** to save the task details. User credential dialog will appear, as shown below:

**Task Scheduler**

User Name : voyager\adminuser2

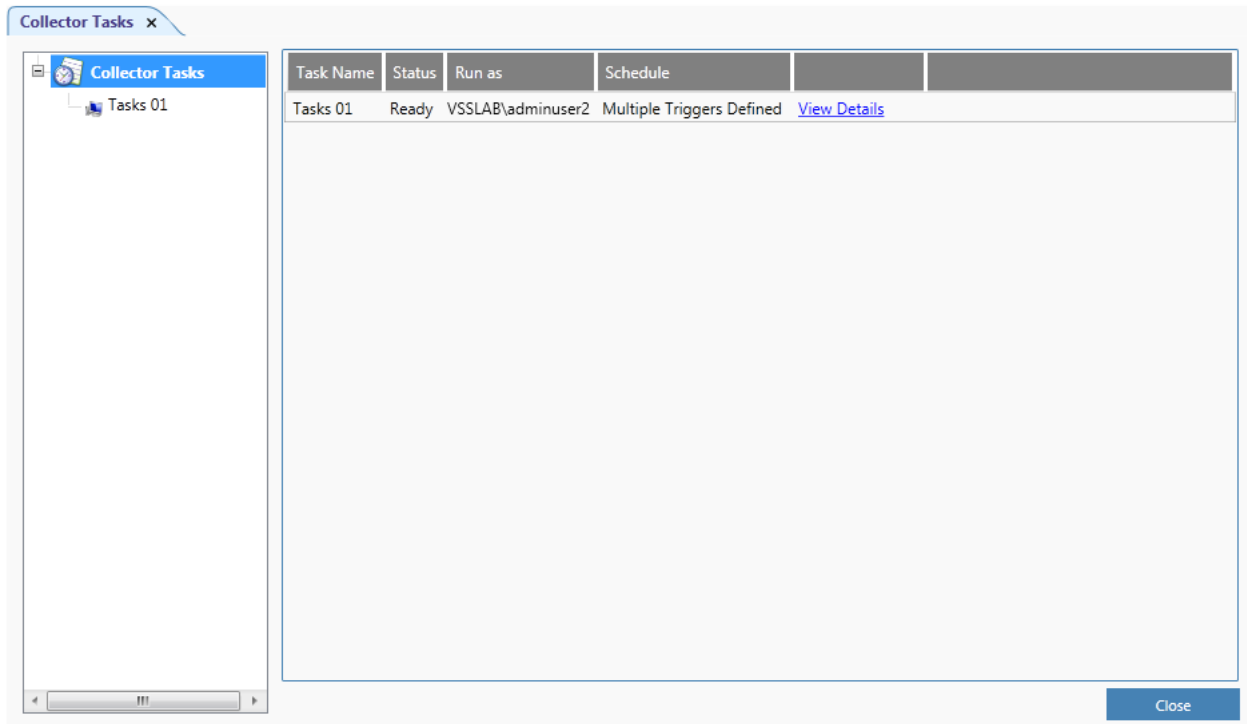

Password : \*\*\*\*\*

Confirm Password : \*\*\*\*\*

**OK** **Cancel**

Specify Run As account and password, click **OK** to create a Data Collector Task.

- The task will be added to Windows Scheduled Tasks and will be displayed in the Collector Tasks window as shown below:

## Live Performance Data

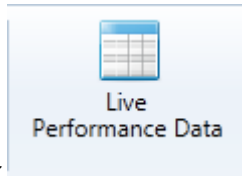

---

[How to view the occurrence of configured performance counters in Data Collector?](#)

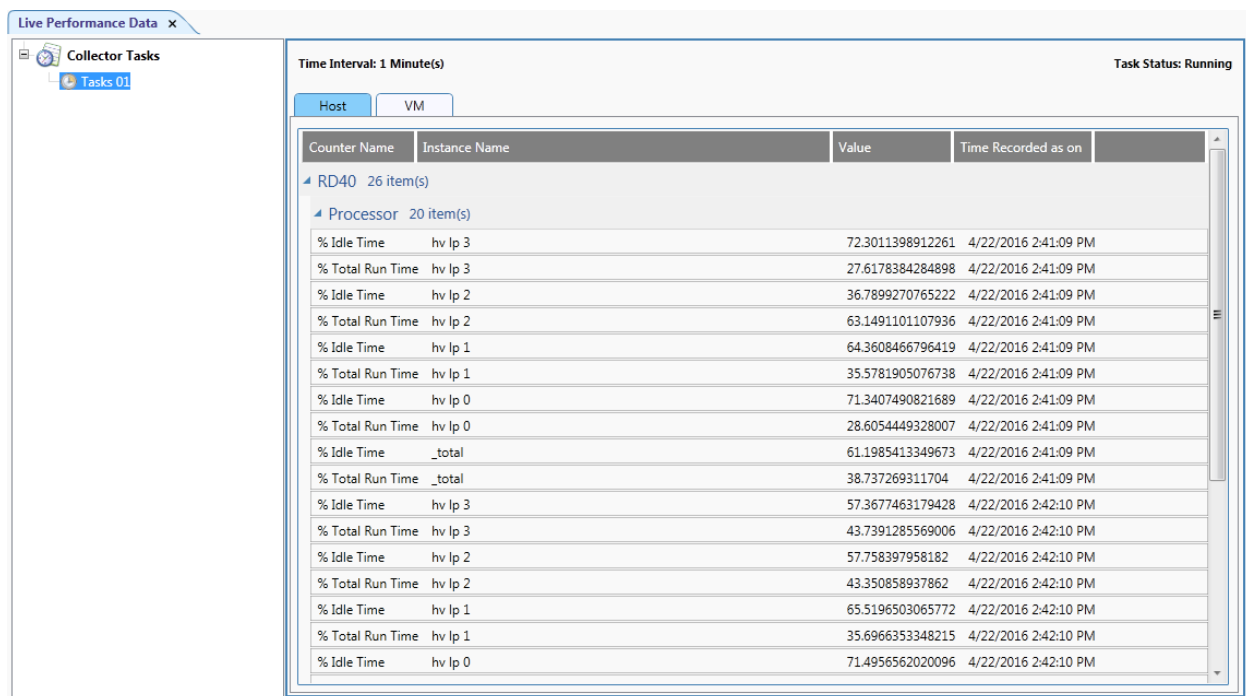

## How to view the occurrence of configured performance counters in Data Collector?

Live Performance Data feature allows you to view the occurrence of all performance counters for the host or virtual machines configured in the Data Collector Task in the application. This feature will display you the collected performance counters at the time intervals specified in the data collector task.

Click  under Performance Analyzer module. This will launch the Live Performance Data window as shown below.

In the left pane, it will show the list of tasks configured in the **Data Collector** feature. Select a task and view the occurrence of the performance counters for a host and virtual machines at different times.

The screenshot shows the "Live Performance Data" window. On the left, there is a "Collector Tasks" pane with "Tasks 01" selected. The main area displays a table of performance counters. The table has columns for "Counter Name", "Instance Name", "Value", and "Time Recorded as on". The data is organized into a tree structure under "RD40" (26 items), which includes "Processor" (20 items). The table shows various performance metrics like "% Idle Time" and "% Total Run Time" for different processor instances (hv lp 3, hv lp 2, hv lp 1, hv lp 0) and a "\_total" row. The values are numerical, and the times are recorded on 4/22/2016.

Counter Name	Instance Name	Value	Time Recorded as on
RD40 26 item(s)			
Processor 20 item(s)			
% Idle Time	hv lp 3	72.3011398912261	4/22/2016 2:41:09 PM
% Total Run Time	hv lp 3	27.6178384284898	4/22/2016 2:41:09 PM
% Idle Time	hv lp 2	36.7899270765222	4/22/2016 2:41:09 PM
% Total Run Time	hv lp 2	63.1491101107936	4/22/2016 2:41:09 PM
% Idle Time	hv lp 1	64.3608466796419	4/22/2016 2:41:09 PM
% Total Run Time	hv lp 1	35.5781905076738	4/22/2016 2:41:09 PM
% Idle Time	hv lp 0	71.3407490821689	4/22/2016 2:41:09 PM

# Performance Report

---

[About Performance Report](#)

[How to generate Host Performance Summary reports?](#)

[How to generate VM Performance Summary reports?](#)

## About Performance Reports

---

The Performance Reports in VM Performance Analyzer module is a powerful feature that shows reports of host and virtual machine performance counters that are configured in the Data Collector feature. This feature also displays the summarized reports of performance counters such as "By Every 15 minutes of the day", "By Every Half hour of the day", "By Day" etc.,. It may be useful to analyze the workload by aggregating data from pre-defined time intervals such as Daily, Weekly and Monthly as subsets of data.

See also

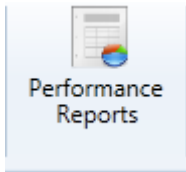

- [How to generate Host Performance Summary Reports?](#)
- [How to generate VM Performance Summary Reports?](#)

## How to generate Host Performance Summary Reports?

---

Click  under VM Performance Analyzer module. This will bring up the Performance Reports Wizard as shown below:

### Step 1: Host/VMs Selection

Select the hosts from the list of Host Performance Report drop-down. The hosts for which performance counter data has been collected will be displayed here.

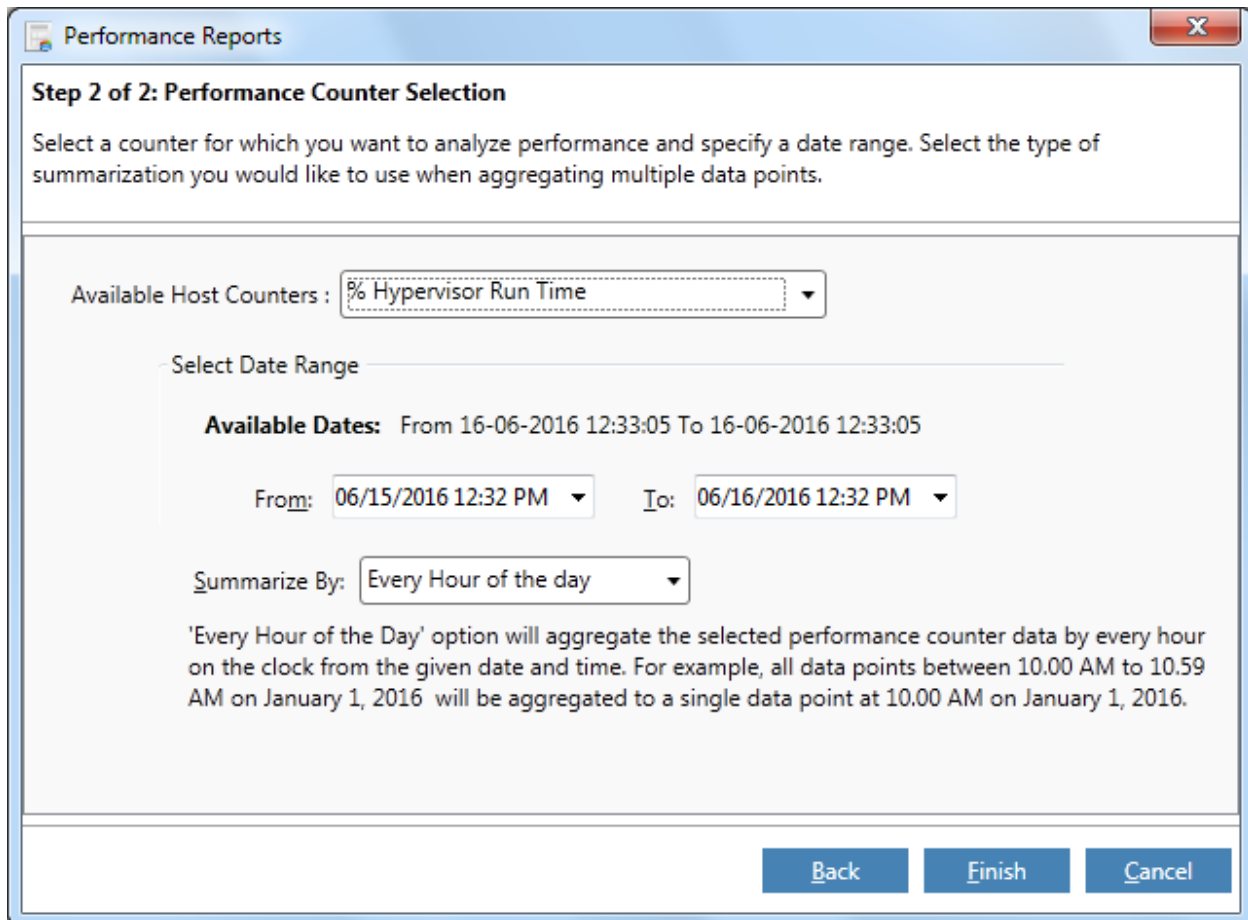

The image shows a screenshot of a Windows-style dialog box titled "Performance Reports". The window has a standard title bar with a close button (X) in the top right corner. The main content area is titled "Step 1 of 2: Host/VMs Selection" and contains the following text: "Select Hosts or VMs to generate the performance report. Only those Hosts and VMs for which performance data has been collected will be displayed here." Below this text, there are two radio button options. The first option is "Host Performance Report:" with a selected radio button. To its right is a dropdown menu showing "RD30". The second option is "VM Performance Report:" with an unselected radio button. To its right is a list box showing "RD30" with a checkmark next to it. At the bottom of the dialog, there are three buttons: "Back" (disabled), "Next" (active), and "Cancel".

Click Next to proceed.

## Step 2: Performance Counter Selection

Select a Performance counter from the list of Available Host Counters. Select a Date Range and the type of summary you would like to use when aggregating multiple data points.

The screenshot shows a dialog box titled "Performance Reports" with a close button (X) in the top right corner. The main heading is "Step 2 of 2: Performance Counter Selection". Below the heading is a descriptive text: "Select a counter for which you want to analyze performance and specify a date range. Select the type of summarization you would like to use when aggregating multiple data points." The dialog contains several input fields: "Available Host Counters:" with a dropdown menu showing "Hyper-V Hypervisor Logical Processor" selected; "Select Date Range:" with a date field; "From:" with a time field set to "2:32 PM"; and "Summarize By:" with a dropdown menu set to "Every Hour of the day". A list of performance counters is displayed in a dropdown menu, including "% Hypervisor Run Time" (highlighted), "% Guest Run Time", "% Total Run Time", and "% Idle Time". At the bottom of the dialog are three buttons: "Back", "Finish", and "Cancel". A detailed note at the bottom explains the "Every Hour of the Day" option: "'Every Hour of the Day' option will aggregate the selected performance counter data by every hour on the clock from the given date and time. For example, all data points between 10.00 AM to 10.59 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016."

**Available Dates** shows the start and end date range value for which collected data of the selected counter is available.

**Summarize By** option shows the following details as shown below:

- **Every 15 minutes of the day** - 'Every 15 minutes of the day' option will aggregate the selected performance counter data by every 15 minutes on the clock from the given date and time. For example, all data points between 10.00 AM to 10.14 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016.
- **Every Half hour of the day** - 'Every Half Hour of the day' option will aggregate the selected performance counter data by every half hour on the clock from the given date and time. For example, all data points between 10.00 AM to 10.29 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016.
- **Every Hour of the day** - 'Every Hour of the day' option will aggregate the selected performance counter data by every hour on the clock from the given date and time. For example, all data points between 10.00 AM to 10.59 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016.
- **Day** - 'Day' option will aggregate the selected performance counter by every day from the given date and time.
- **Day of week** - 'Day of week' option will aggregate the selected performance counter by every day of the week such as Monday, Tuesday and so on from the given date and time. For example, all

data points of Mondays will be collected and aggregated as a single data point called Monday. This will help you compare performance of each day of the week with the other days of the week.

- **Week** - 'Week' option will aggregate the selected performance counter by the week number from the given date and time.
- **Month** - 'Month' option will aggregate the selected performance counter by month, such as January, February and so on, from the given date and time. This will help analyze performance of workload with respect to seasonal variations such as holiday months.
- **Do Not Summarize** - 'Do Not Summarize' option will show the raw data point for selected performance counter from given date and time.

Click **Finish** to generate the report.

- You can use Chart Style option to change the view of the chart style.
- You can use Select Instances option to filter the instances of the performance counter.

## How to generate VM Performance Summary Reports?

---

Click  under VM Performance Analyzer module. This will bring up the Performance Reports Wizard as shown below:

### Step 1: Host/VMs Selection

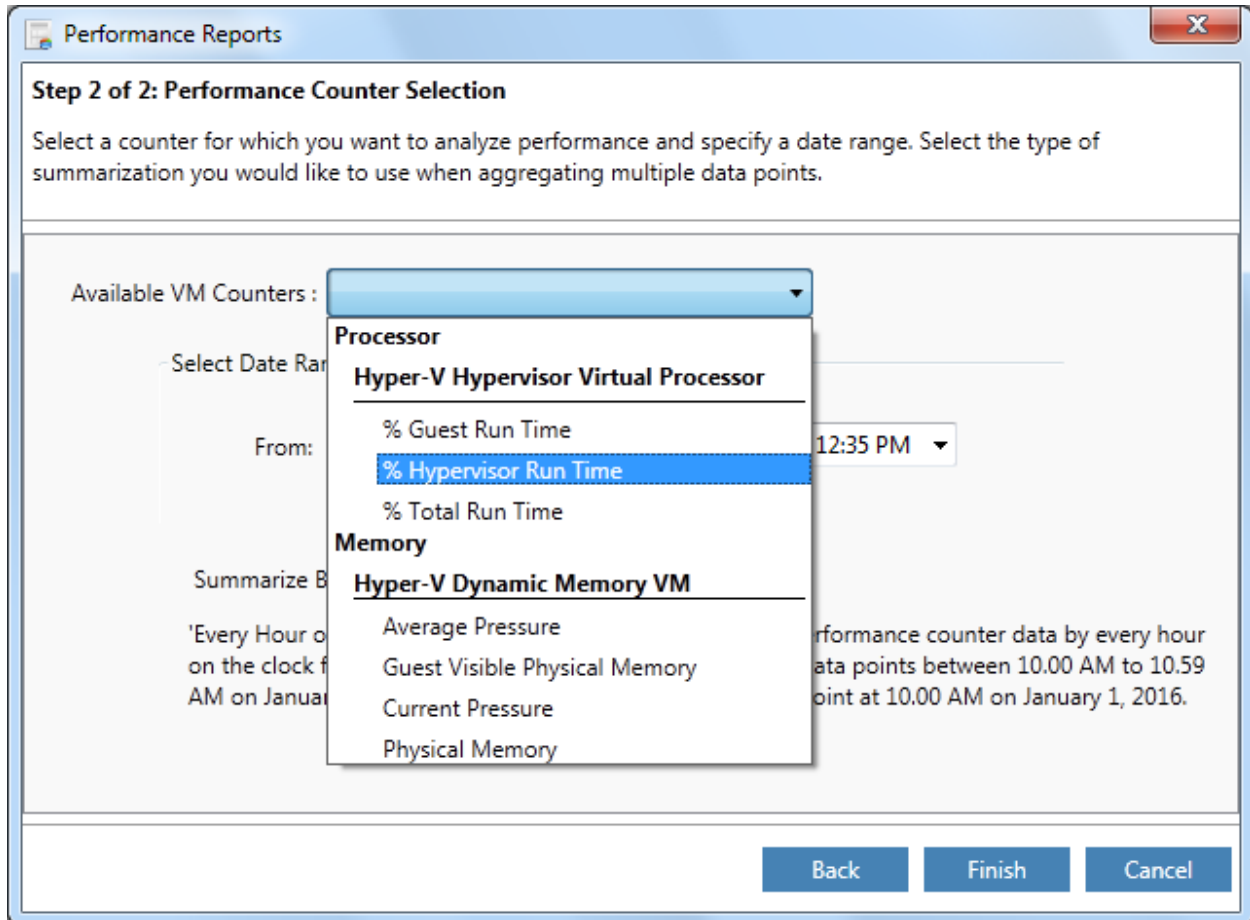

Select the VMs from the VM Performance Report drop-down. The VMs for which performance counter data has been collected will be displayed here.

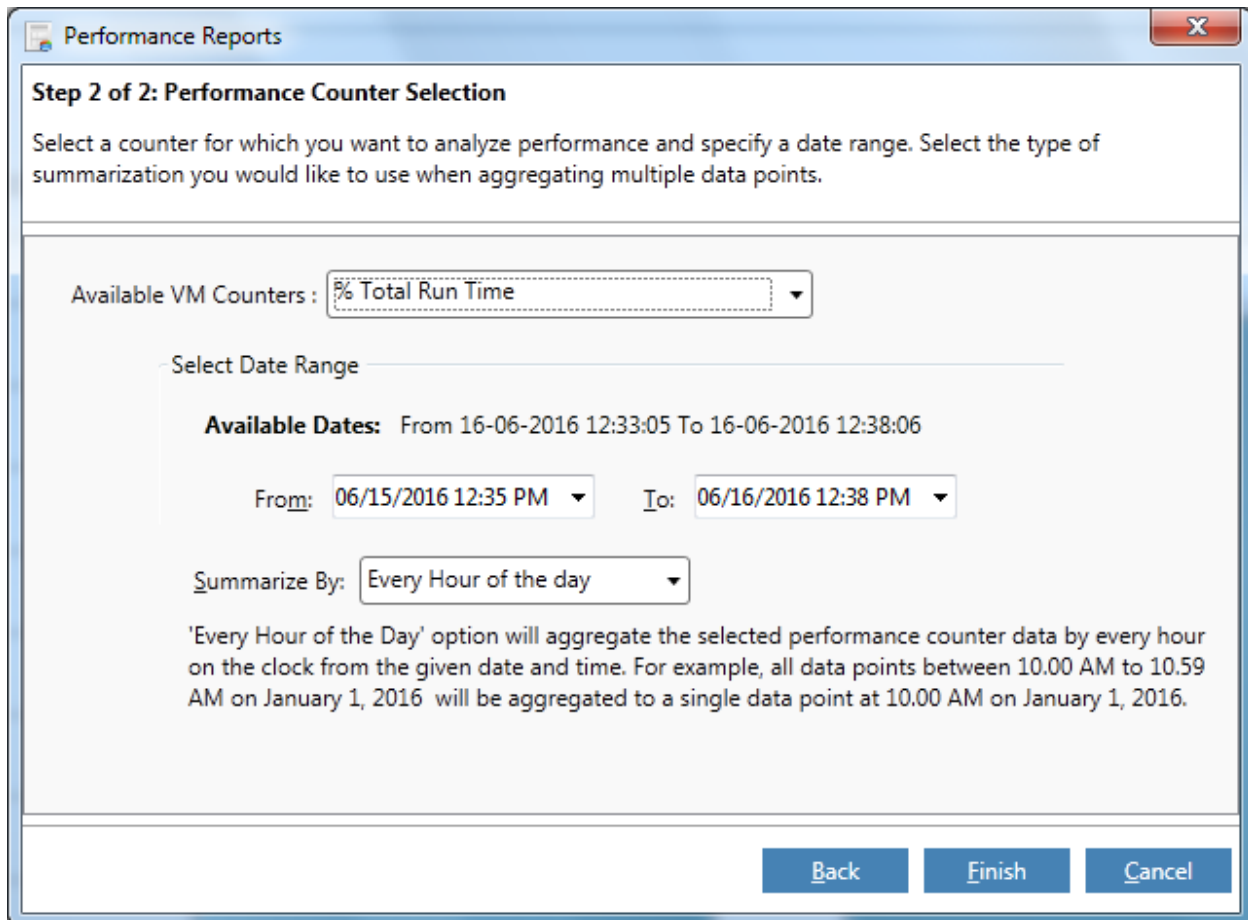

The screenshot shows a window titled "Performance Reports" with a close button in the top right corner. The main content area is titled "Step 1 of 2: Host/VMs Selection" and contains the following text: "Select Hosts or VMs to generate the performance report. Only those Hosts and VMs for which performance data has been collected will be displayed here." Below this text are two radio button options. The first is "Host Performance Report:" with a dropdown menu showing "RD30". The second is "VM Performance Report:" which is selected. Its dropdown menu shows "RD71,RD90,RD74". Below the dropdown is a list box with the heading "RD40" and a list of items: RD71 (checked), RD90 (checked), RD74 (checked), Rd72 (unchecked), RD48 (unchecked), and RD41 (unchecked). At the bottom of the window are three buttons: "Back", "Next", and "Cancel".

Click Next to proceed.

## Step 2: Performance Counter Selection

Select a Performance counter from list of Available VM counters. Specify a Date Range and Select the type of summary you would like to use when aggregating multiple data points.

**Available Dates** shows the start and end date range value for collected data of the selected counter

**Summarize By** option shows the following details as shown below:

- **Every 15 minutes of the day** - 'Every 15 minutes of the day' option will aggregate the selected performance counter data by every 15 minutes on the clock from the given date and time. For example, all data points between 10.00 AM to 10.14 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016.
- **Every Half hour of the day** - 'Every Half Hour of the day' option will aggregate the selected performance counter data by every half hour on the clock from the given date and time. For example, all data points between 10.00 AM to 10.29 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016.
- **Every Hour of the day** - 'Every Hour of the day' option will aggregate the selected performance counter data by every hour on the clock from the given date and time. For example, all data points between 10.00 AM to 10.59 AM on January 1, 2016 will be aggregated to a single data point at 10.00 AM on January 1, 2016.
- **Day** - 'Day' option will aggregate the selected performance counter by every day from the given date and time.
- **Day of week** - 'Day of week' option will aggregate the selected performance counter by every day of the week such as Monday, Tuesday and so on from the given date and time. For example, all

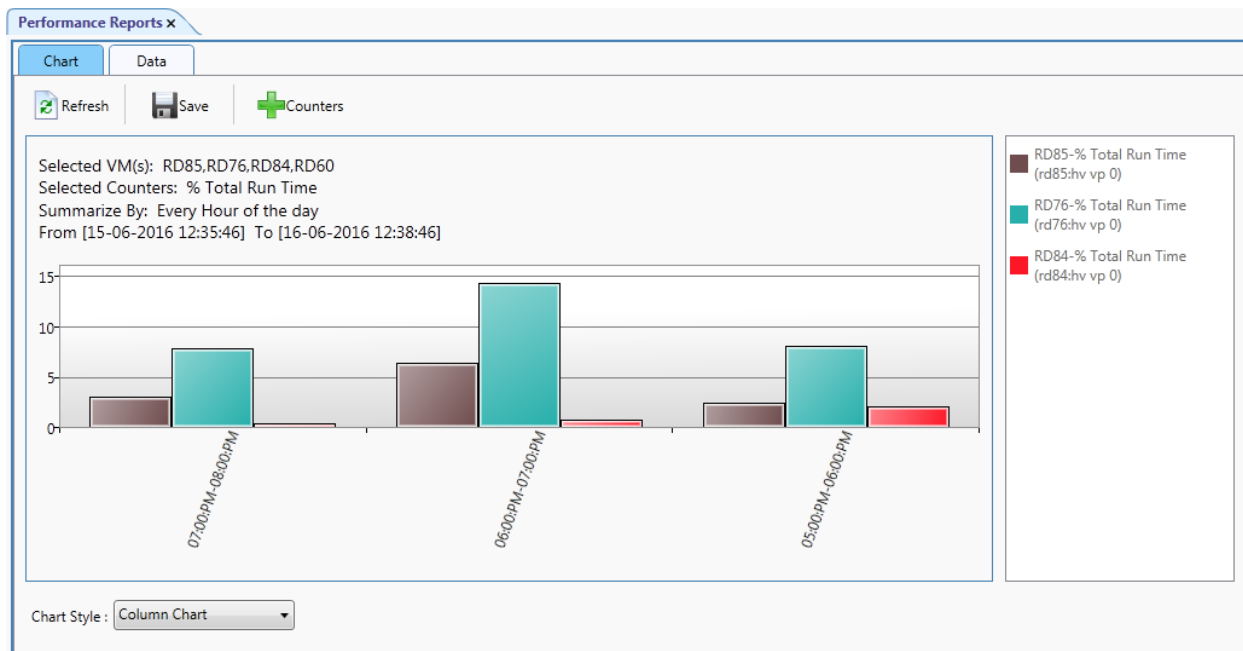

data points of Mondays will be collected and aggregated as a single data point called Monday. This will help you compare performance of each day of the week with the other days of the week.

- **Week** - 'Week' option will aggregate the selected performance counter by the week number from the given date and time.
- **Month** - 'Month' option will aggregate the selected performance counter by month, such as January, February and so on, from the given date and time. This will help analyze performance of workload with respect to seasonal variations such as holiday months.
- **Do Not Summarize** - 'Do Not Summarize' option will show the raw data point for selected performance counter from given date and time.

Click **Finish** to generate the report.

Once the data collection process is complete, the report would be generated in a report window as shown below:

You can use **Chart Style** option to change the view of the chart style.

# VM Performance Monitor

---

Live Monitor

[How to view the performance metrics in Live Monitor?](#)

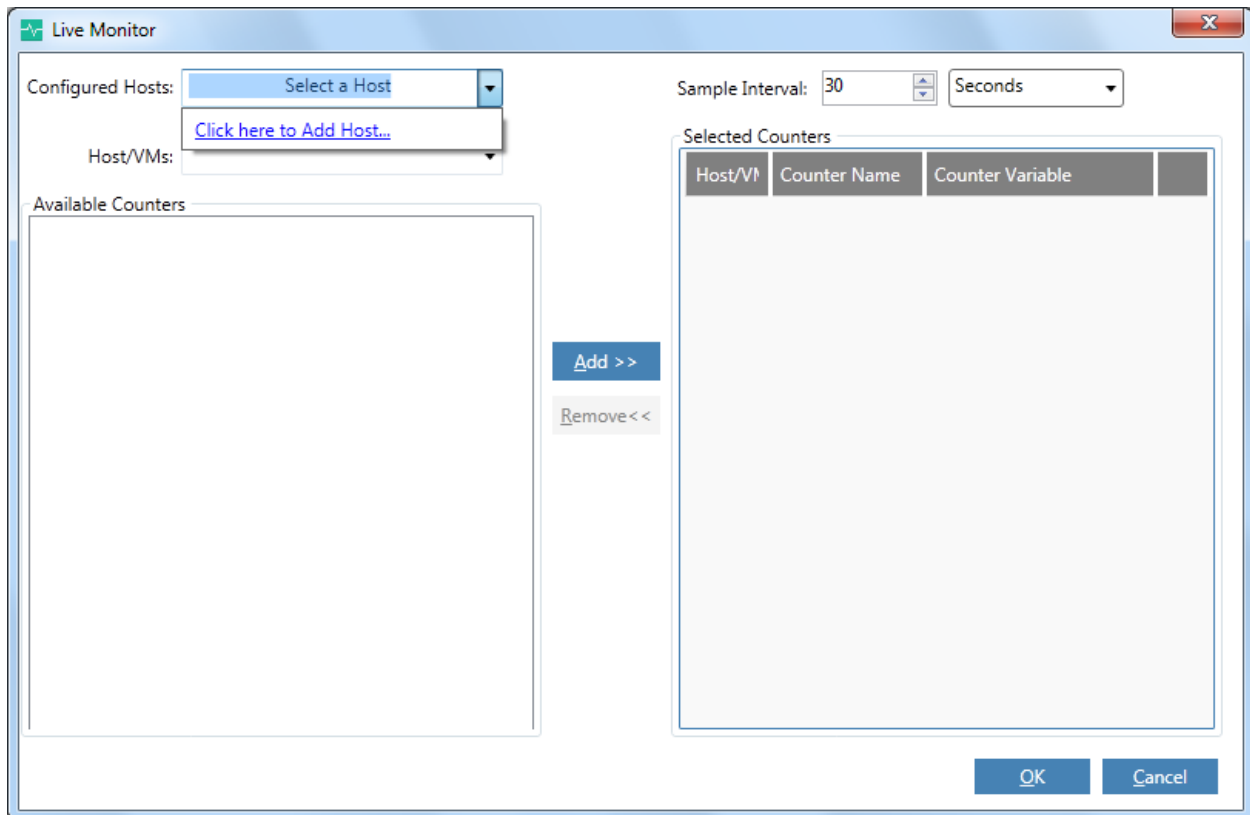

## How to view the performance metrics in Live Monitor?

---

Live Monitor allows the administrators to keep a tab on the performance metrics of Hyper-V hosts and their VMs. It enables them to monitor important CPU, Memory, IO and Network resources using charts and tables in their environment.

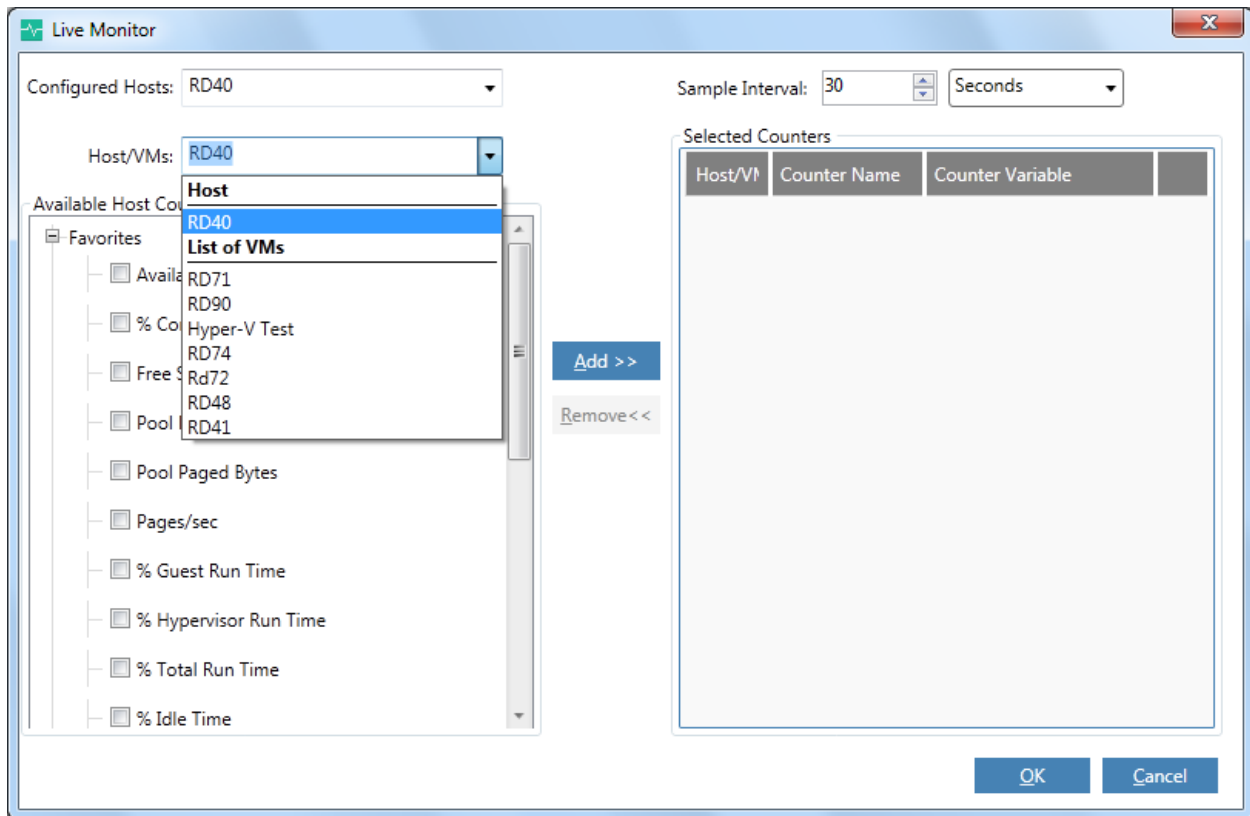

Click  under VM Performance Monitor module. This will show the Live Monitor window as shown below:

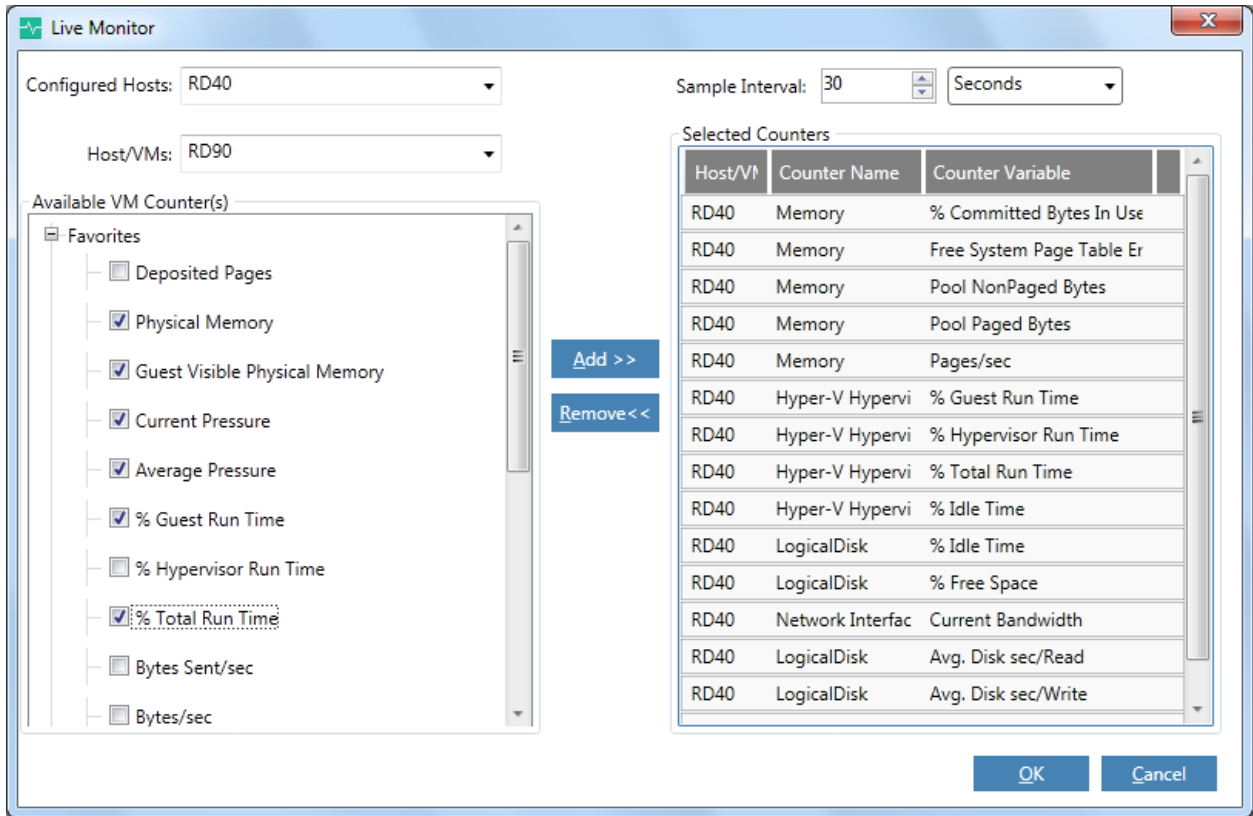

To configure a host for monitoring, click [Click here to Add Host...](#) menu.

Select a host from the list of Configured Hosts drop-down. The list of VMs in the selected host will be displayed in the Host/VM drop-down, as shown below:

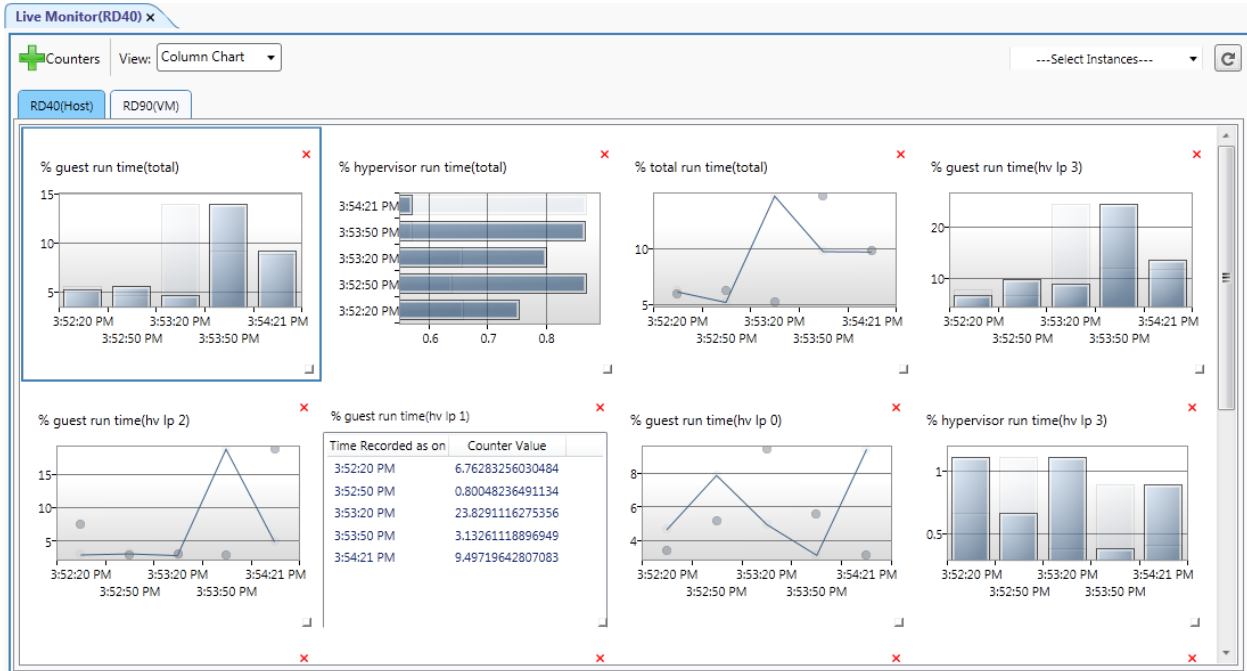

1. Select a host/VM. This will display the Performance counters for the selected host/VM in the tree view.
2. Select the desired counters using the checkboxes.
3. Click **Add >>** to add the selected counters.

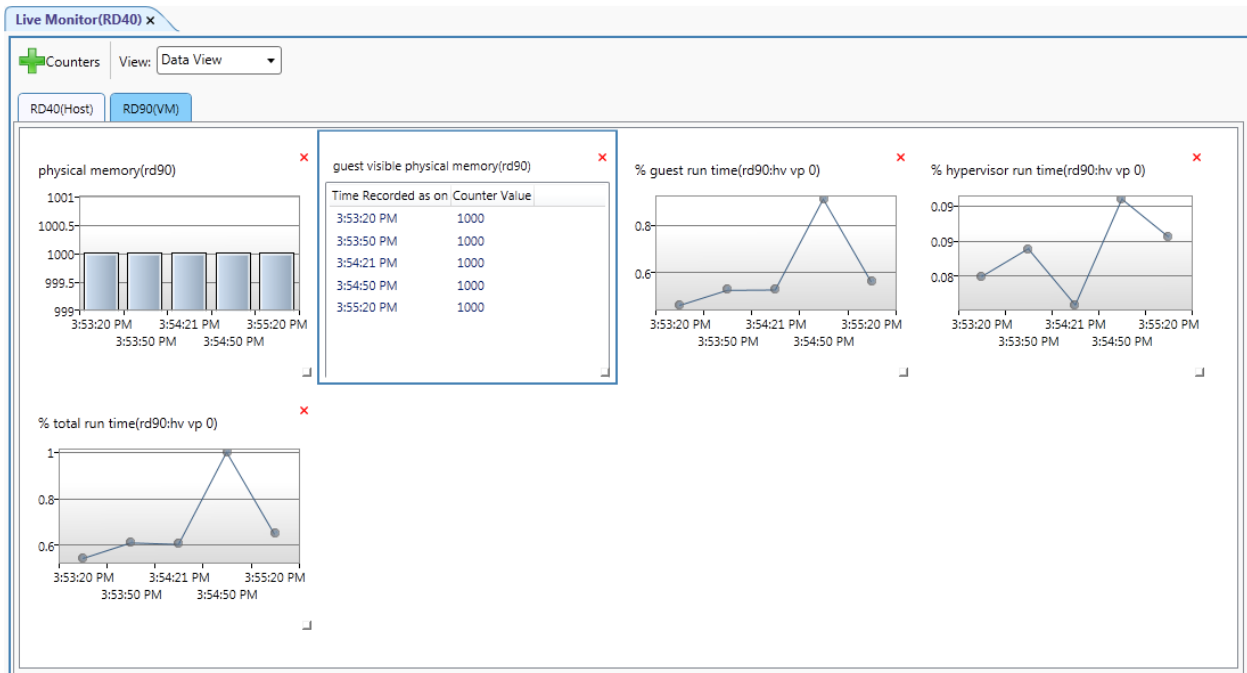

4. Set a Sample Interval time to collect and display the selected counters every sample interval.
5. Use **Remove <<** button to remove the selected counters.

Click **OK** to proceed.

Once the data collection process is complete, the report would be generated in a report window as shown below:

You can also view the performance of Virtual Machines as shown below:

# Additional Features

[How to Add host?](#)

[How to Customize Fields?](#)

[How to Apply Filters?](#)

[How to Refresh Data?](#)

[How to Export data?](#)

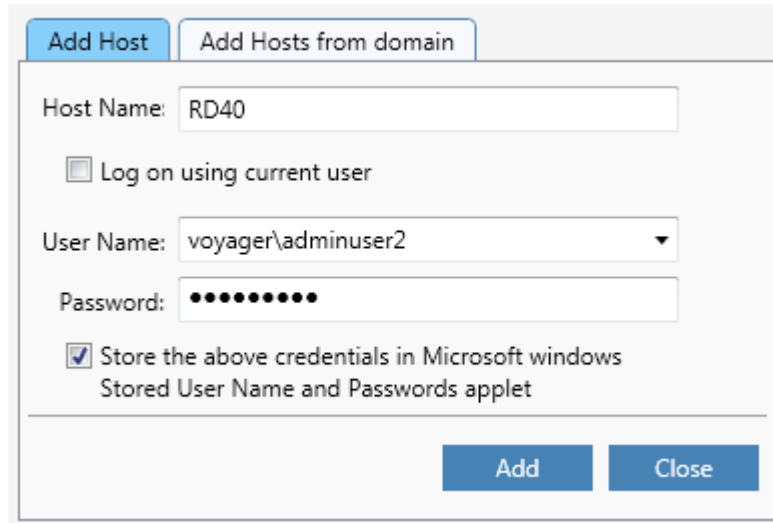

[How to E-mail data?](#)

## How to Add host?

---

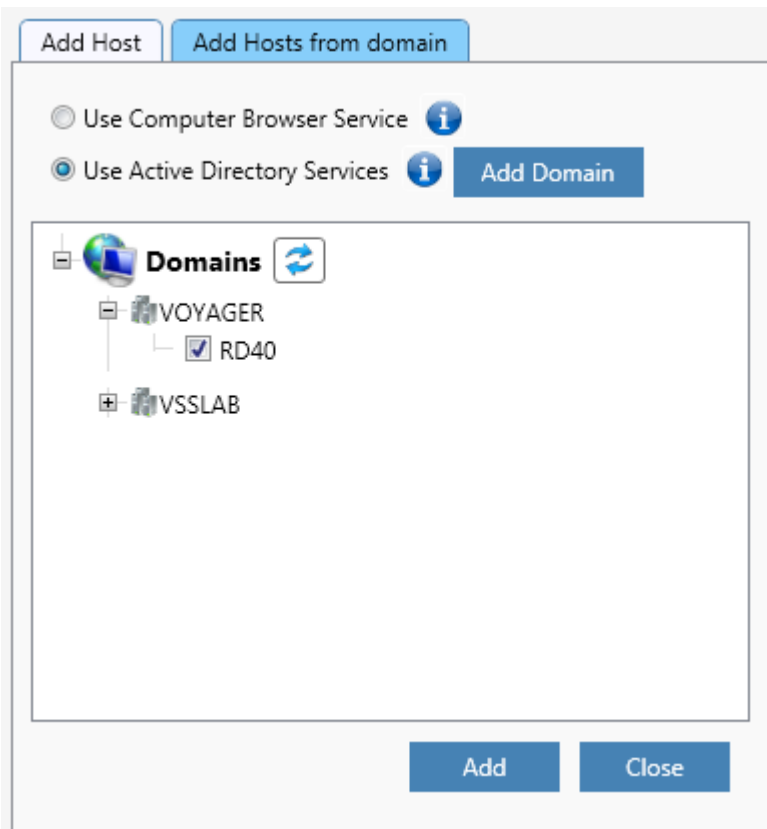

Click **Add Host** tab to enter the host details manually.

- Enter a valid host name.
- Deselect the 'Log on using current user' checkbox, if you like to connect to the host using a different user context.
- Specify an user name and the corresponding password to connect to the specified host.
- Click  button to configure the specified host

Click **Add hosts from domain** tab for enumerating hosts in your network automatically.

Vyapin Virtualization Management Suite uses either Computer Browser Service or Active Directory Services to enumerate computers in a network. You may use the Use Computer Browser service option if you have a smaller network, as it may take time for the Browser service to respond to data requests on large networks. The advantage of a Browser service is that it lists only those computers that are currently active/alive on your network. You may use the Active Directory Services option if you have a large network and you need a quicker enumeration of computers in your domain. However, this option requires that the domain controller is contacted and queried by using an user account. Accordingly, the currently logged on user must have sufficient privileges to connect to a domain controller or you may specify an alternate domain user credential for a domain controller. Select an option for enumerating computers in your domain as shown below:

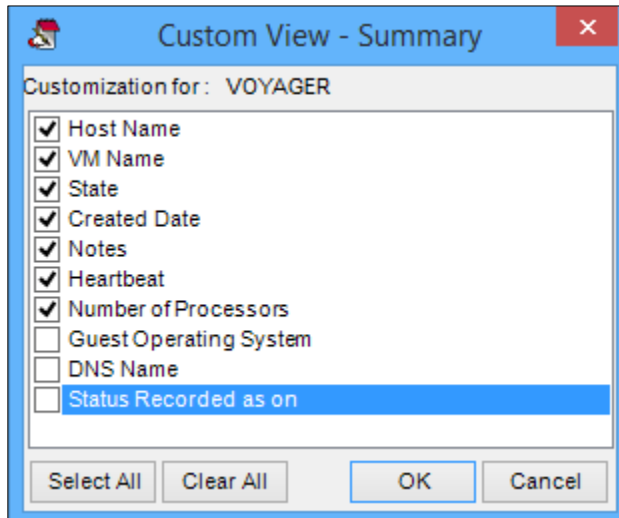

- Expand the desired domain to enumerate the list of hosts that are available in the domain.
- Click **Add Domain** to add a new domain to the domain list.
- Click **Add** button to add the selected host for using it across the product.

## How to Customize fields?

---

Click  **Customize** for customizing the information.

Click  for selecting all the check boxes.

Click  for clearing all the check boxes.

Click  button for confirming the changes.

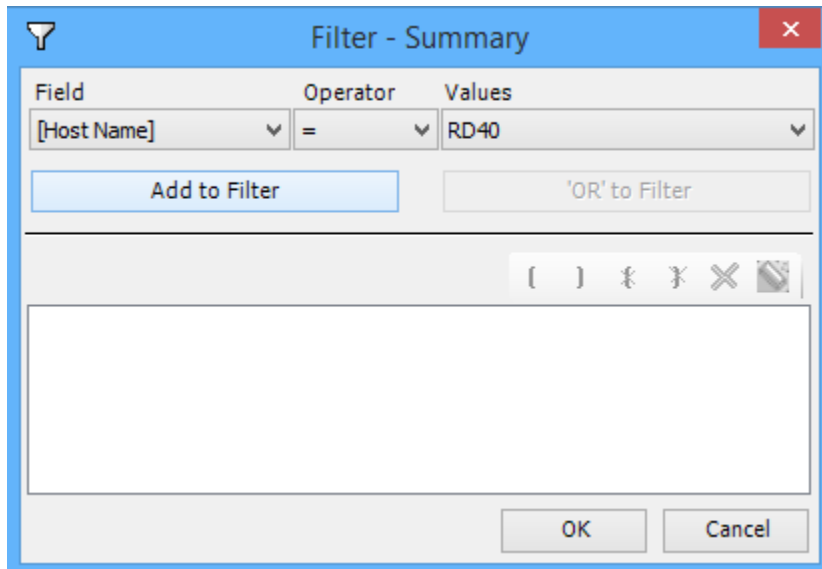

Click  button for canceling the operation.

## How to apply Filters?

---

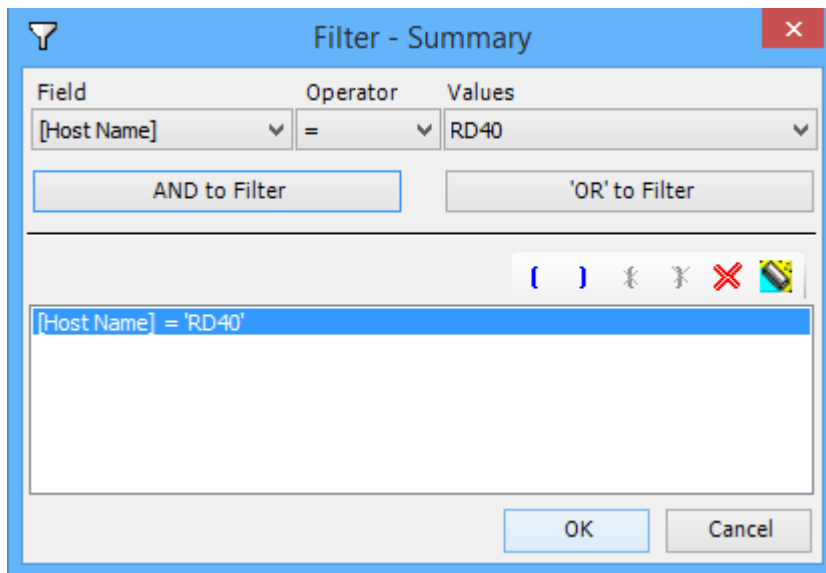

Click  for setting filter options.

The Vyapin Virtualization Management Suite Filter window will be displayed.

To set a filter condition, follow these steps.

1. Click  (Clear All) button and clear the filter.
2. Choose a field name, an operator and a possible value from the respective dropdown options.
3. Click  **Add to Filter**
4. The **Add to Filter** will change to **AND to Filter**. The **OR to Filter** button will be enabled. The selected condition will be set as a filter and displayed (as shown below).

5. Click OK to apply the filter.

**Note:**

\* Use the ,  and  to build enhanced filter condition as shown below:

\* (Field A = Value 1 AND Field B = Value 2) OR (Field C = Value 3 AND Field D = Value 4)

\* Use  to remove the parenthesis

\* Use  to delete a selected condition.

## How to Refresh Data?

---

Refresh the current report data to view the latest information.

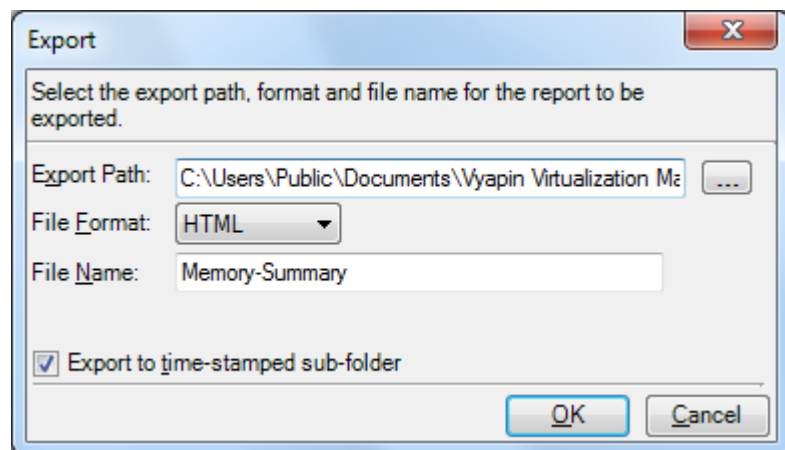

Click  Refresh button in the toolbar available in the report window to refresh report data. The existing data will be cleared and latest data will be loaded in the report window.

## How to Export Data?

---

The Export feature helps the user to export report data generated by Vyapin Virtualization Management Suite to a file using various formats namely HTML/CSV/XLSX.

Click  for exporting the information in the desired format or select Export option to export report data to a file in the desired format.

Specify a file name to export report data to or accept the default file name. Specify the export path and select a desired file format. The path refers to the destination location where the output file generated should be stored. It can be given using the Browse button. To avoid overwrite existing files, if any, in the specified export path, By default, the report will be exported to a time-stamped sub-folder, in the format 'YYYY-MM-DD HH.MM.SS', under the specified export path.

In XLSX file format, the information is stored as sheets in Excel file. For each report, a XLSX file will be generated. The name of the XLSX file will be the name of the report and is stored in the specified destination path if "Export to time-stamped folder" option is cleared. The XLSX file will be stored under a sub-folder, of the form YYYY-MM-DD HH.MM.SS, under the specified export path, if "Export to time-stamped folder" option is set.

In CSV file format, the information is stored as comma separated values. For each report, a CSV file will be generated. The name of the CSV file will be the name of the report and is stored in the specified destination path if "Export to time-stamped folder" option is cleared or under a sub-folder, of the form YYYY-MM-DD HH.MM.SS, under the specified export path if "Export to time-stamped folder" option is set.

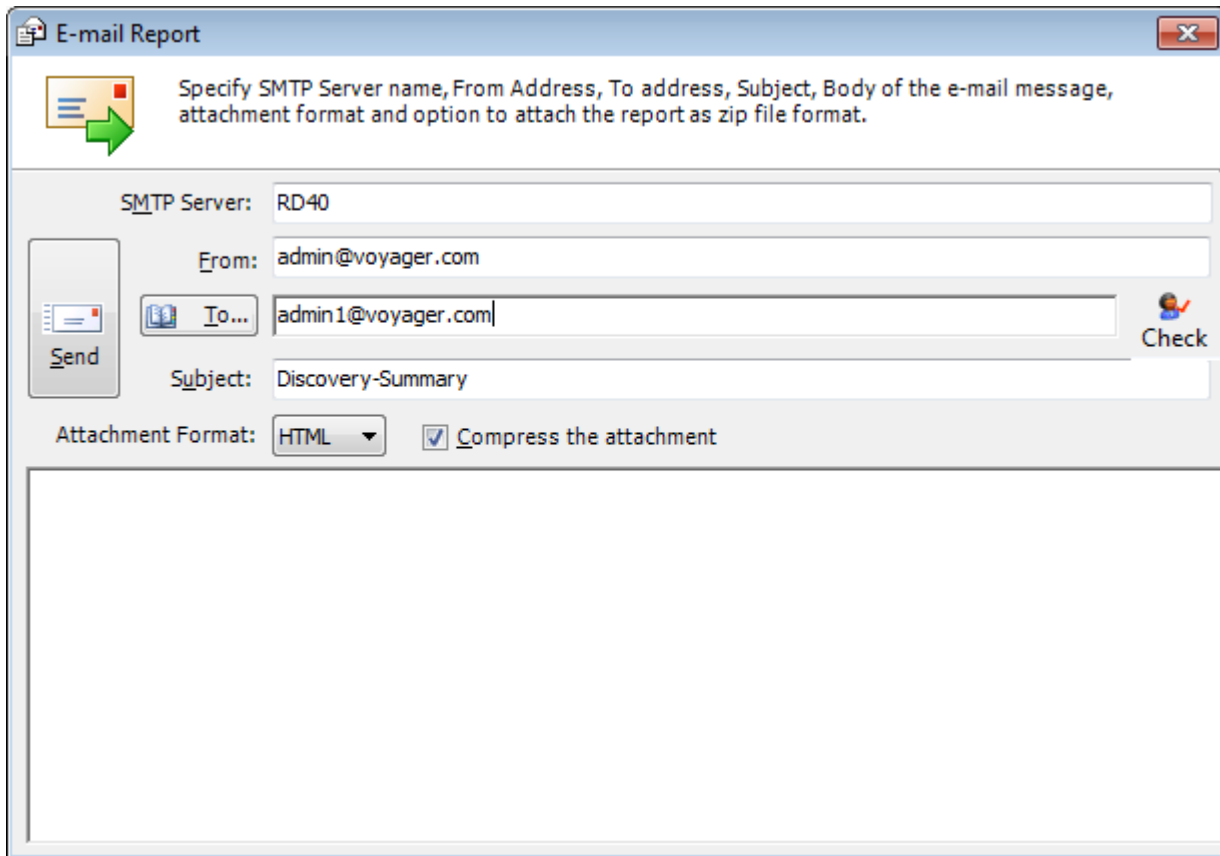

In HTML file format, the information is stored as a html file. For each report, a HTML file will be generated. The name of the HTML file will be the name of the report and is stored in the specified destination path if "Export to time-stamped folder" option is cleared or under a sub-folder, of the form YYYY-MM-DD HH.MM.SS, under the specified export path if "Export to time-stamped folder" option is set.

## How to Email Data?

---

Vyapin Virtualization Management Suite provides the option to e-mail the reports generated.

Click  button in the toolbar to e-mail the report to e-mail recipients. E-mail dialog will be displayed as shown below:

For e-mailing reports, Vyapin Virtualization Management Suite requires SMTP Server, From E-mail Address, To E-mail Addresses (recipients separated by semicolon) and the report attachment format.

Specify SMTP server name, from Address, To address, mail subject, mail content, attachment format and option to compress the attachment.

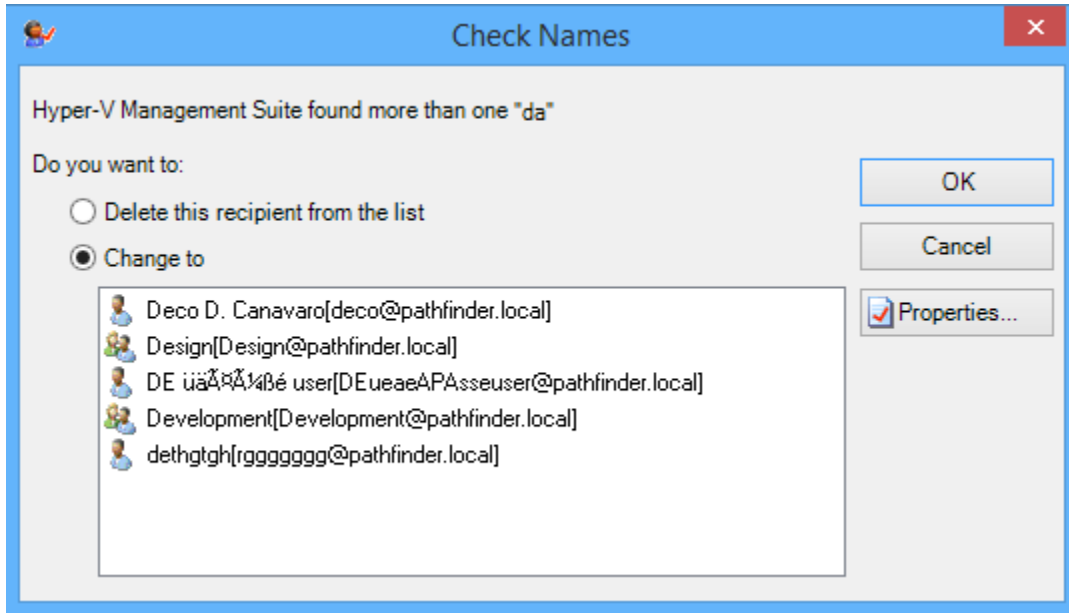

Click  button to send the report by e-mail to the selected recipients.

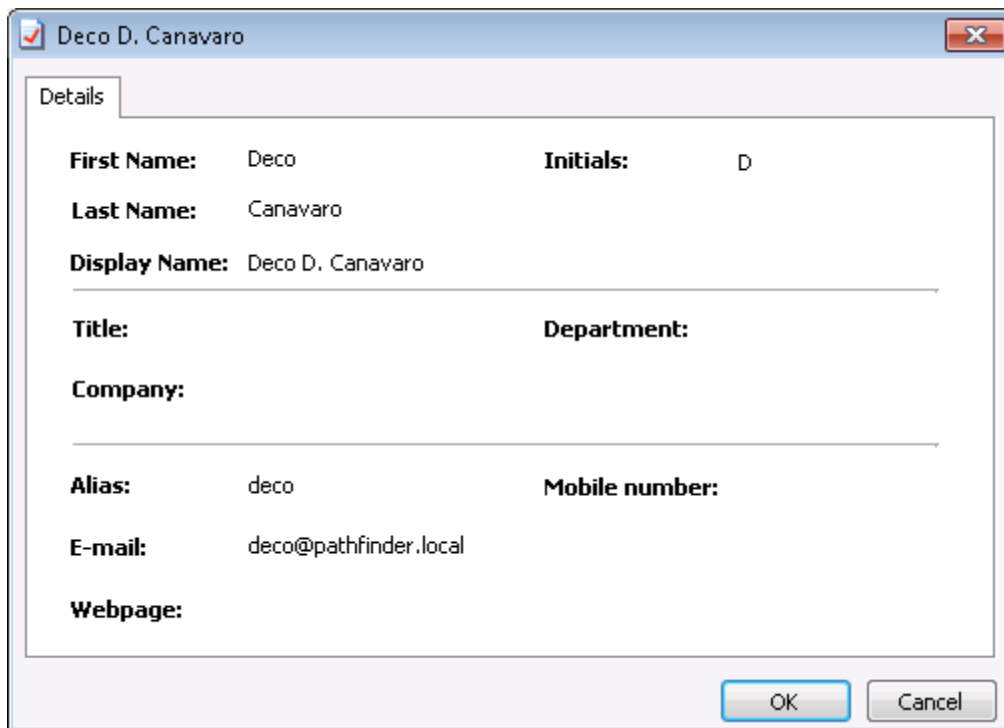

## Check names

Vyapin Virtualization Management Suite provides check name feature to check the existence of corresponding mail-enabled recipient object in Active Directory. To check name, click  Check button. If the entered name matches with a mail object in the Active directory / its trusted domain, name entered in From address textbox will be replaced by the corresponding active directory recipient object. If there is more than one match, a dialog which contains matching Active Directory recipients will appear as shown below. You can select one or more recipient and click OK.

\* To get more information about the listed recipients under Change to, select the name, and then click.

If there is no match for the name entered by the user in Active Directory, a dialog will appear as shown below:

Select Delete option in the above dialog to remove the recipient name from To address text box. Click Cancel button to close this dialog and the unresolved recipient(s) will appear in red color.

[How to uninstall Vyapin Virtualization Management Suite?](#)

## Troubleshooting

---

If and when a problem arises, please forward the following information to support@vyapin.com to revert back to you with a solution. These files will be available where Vyapin Virtualization Management Suite is installed.

### **Error Log File**

E.g., <Application Data Folder>\Vyapin Virtualization Management Suite.Log

### **Note**

<Application Data Folder> is the common area where Vyapin Virtualization Management Suite settings will be stored in the machine running Vyapin Virtualization Management Suite. The <Application Data Folder> can be found from the Help -> About screen. The default path of <Application Data Folder> is as follows:

Windows 7, Windows 8, Windows 8.1, Windows 10, Windows Server 2008, Windows Server 2008 R2  
Windows Server 2012, Windows Server 2012 R2 - C:\Users\Public\Documents\Vyapin Virtualization  
Management Suite

## How to uninstall Vyapin Virtualization Management Suite

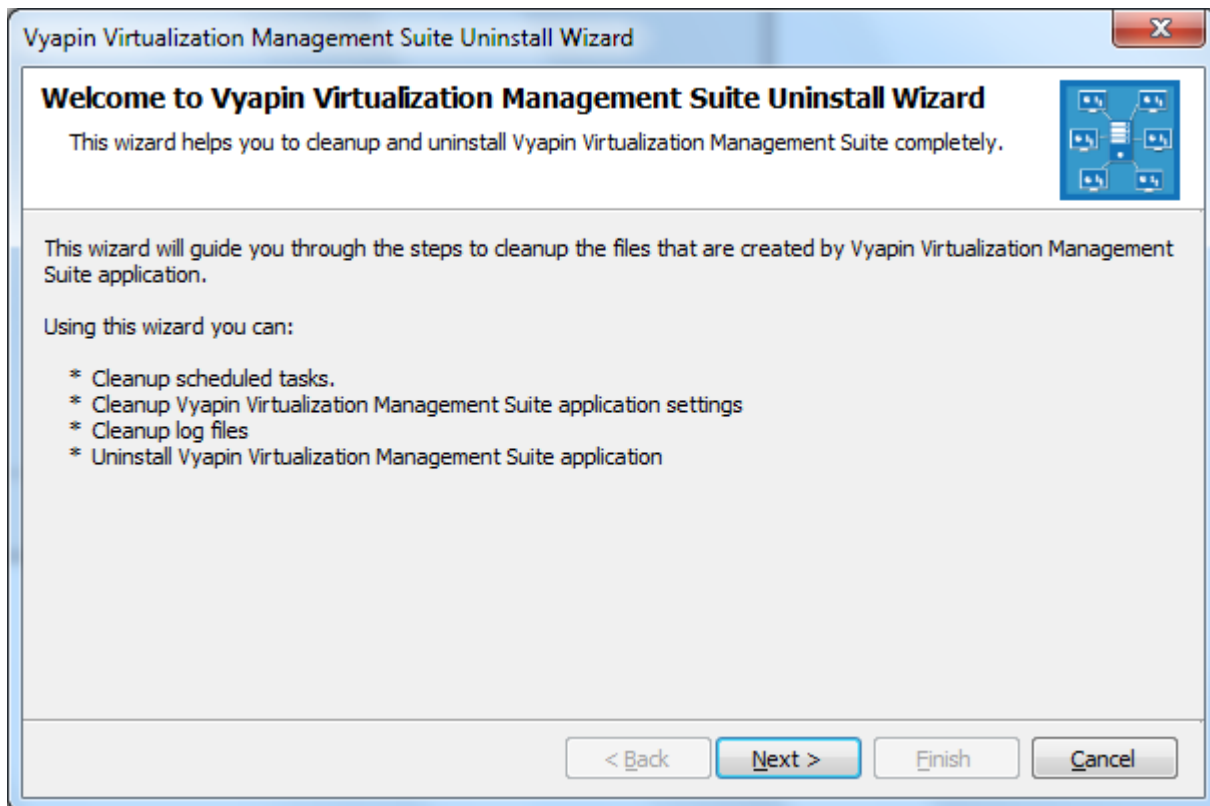

---

When you uninstall Vyapin Virtualization Management Suite through Control Panel - Add / Remove Programs applet, Windows Installer program will remove only the application files from your machine. But, the application related files created by Vyapin Virtualization Management Suite remain in the computer. In order to remove Vyapin Virtualization Management Suite worker files completely, the uninstall wizard provides a set of cleanup options to perform the cleanup operation based upon your selection.

Use this wizard to cleanup the files that are created by Vyapin Virtualization Management Suite application selectively and uninstall Vyapin Virtualization Management Suite completely from the machine.

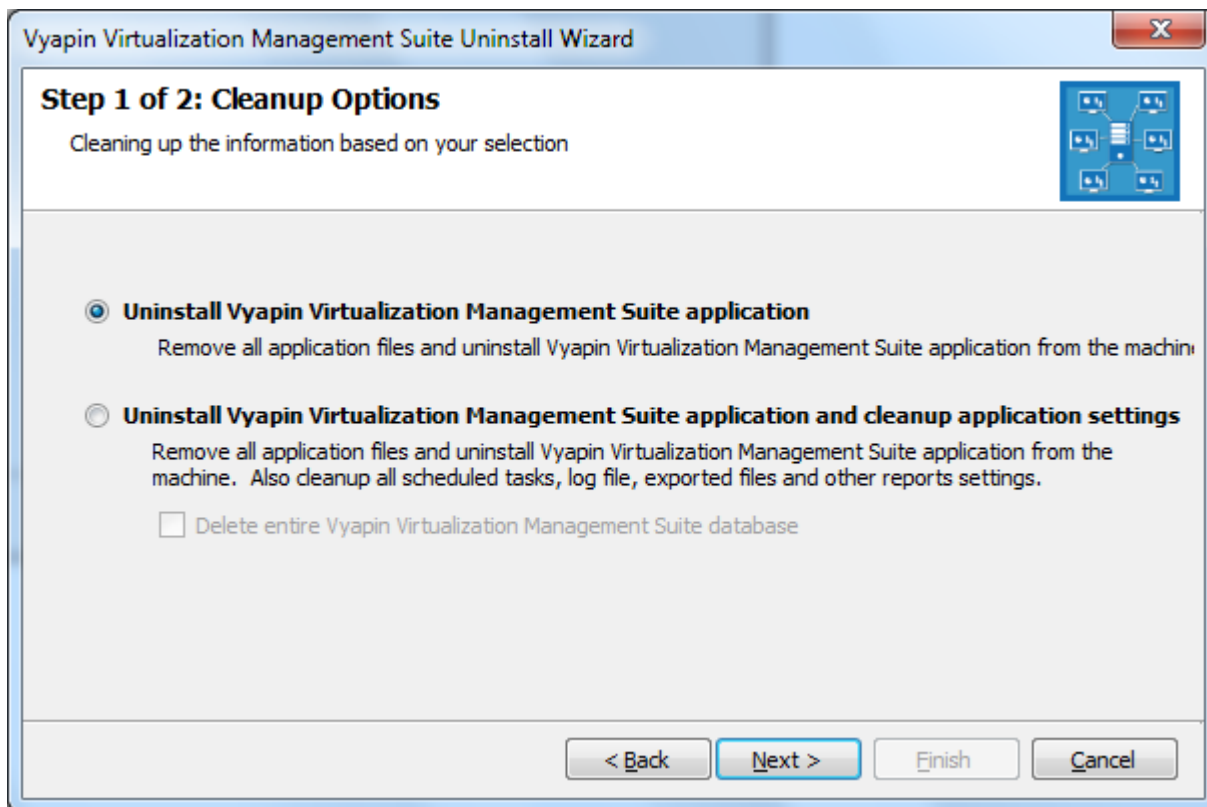

1. Launch the uninstall wizard by clicking Start -> Programs -> Vyapin Virtualization Management Suite -> Uninstall Hyper-V Management Suite.

The **Vyapin Virtualization Management Suite Uninstall Wizard** dialog will be shown as below:

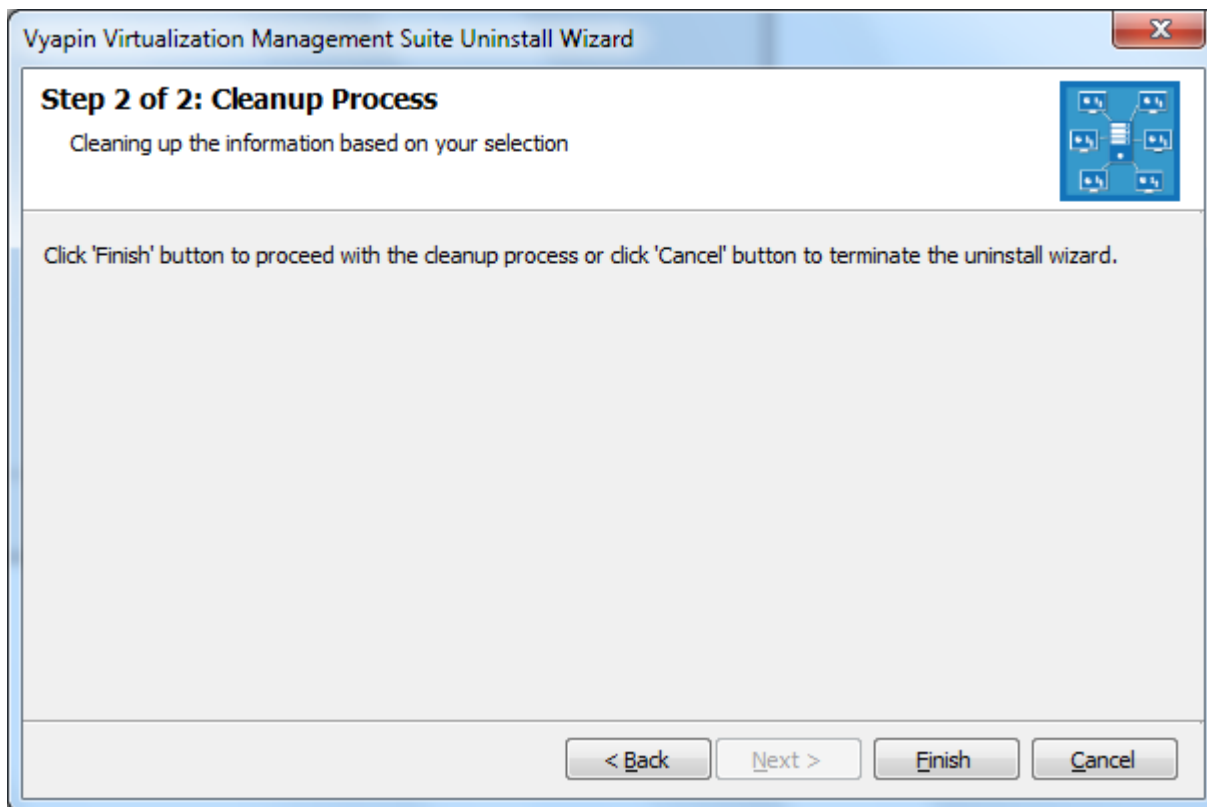

Click Next to proceed.

2. Select required cleanup options as shown below:

Click Next to proceed.

3. Confirm the cleanup and/or uninstall process.

Click **Finish** to run cleanup and/or uninstall process. Click **Cancel** to close the wizard.

4. Once the file cleanup process is complete, the uninstall wizard will automatically run Windows Installer program to remove **Vyapin Virtualization Management Suite** application from the machine.
